Staff's proposed changes are intended to reduce costs for retrofit manufacturers by reducing the amount of required in-use compliance emissions testing. In addition, new recall provisions will help protect system purchasers from potentially defective products. Additional proposed changes will improve the process of matching retrofits with their intended vehicles, strengthen ARB's ability to quickly and effectively address systems with high warranty claim rates, provide additional information to fleets on the maintenance and appropriate use of their diesel retrofits, and provide better information to assist applicants in navigating the verification process.

		Notice: 09/28/2012	Hearing: 11/15/2012	Adoption: 11/15/2012	To OAL: 09/27/2013		
Summary: The proposed regulation would provide comprehensive certification, evaluation, and testing procedures for new or emerging emission control technologies for new and in-use light and medium-duty vehicles/engines that may not be expressly covered under present Air Resources Board regulations. Examples of such innovative technologies include, but are not limited to, engine changes and alternative fuel conversions, hybrid powertrain retrofits and greenhouse gas reducing technologies. The proposal would also address the need to update or integrate current procedures for evaluation and certification of alternative fuel retrofit systems, conversion of gasoline or diesel vehicles to hybrid/plug-in hybrid electric vehicles, new vehicle conversions to alternative fuels, etc. The regulation would likely implement a phased-in or tiered approach to certification that will allow early introduction of innovative technologies while at the same time providing lead time for manufacturers to fully develop such technologies. Proposed certification requirements, including durability, warranty, labeling, audit reporting, in-use testing, recall, et al., would be based on provisions in existing regulations for new vehicle/engine certification, on-board diagnostic systems, and aftermarket parts. Certain flexibilities would be incorporated into the proposed certification process to accommodate unique testing requirements of certain technologies and to allow evaluation of future technologies whose operating features and emission characteristics are still undefined.
