

APPENDIX E-1

Summary of Proposed Modifications to the California Assembly-Line Test Procedures

Beginning with the 2001 model year, staff is proposing that the 2% end-of-line quality audit emission test requirement be eliminated. (See Part V of the Staff Report for a discussion of this proposal.) The proposed amendments include modifying the applicability of the California Assembly-Line Test Procedures for 1998 and Subsequent Model-Year Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles from 1998 and subsequent model years to 1998 through 2000 model year. In its place staff is proposing that a new Assembly-Line Test Procedure be adopted beginning with the 2001 model year that does not contain the Quality Audit Test Procedures.
