OVERVIEW AND RECOMMENDATION

A. OVERVIEW

1. Introduction

This Staff Report proposes several regulatory changes. Specifically, these changes affect the criteria used in designating areas with respect to the State ambient air quality standards (State standards), the designation of areas of the State as nonattainment, attainment, and unclassified, and the Kern County portion of the boundary between the San Joaquin Valley Air Basin and the Southeast Desert Air Basin.

The Health and Safety Code (HSC) section 39607(e) requires the Air Resources Board (Board) to establish area designation criteria (refer to Attachment A). These designation criteria provide the basis for the Board to designate areas as nonattainment, attainment, or unclassified for the State standards. In addition, HSC section 39607(e) requires the Board to periodically review the designation criteria to ensure their continued relevance.

The staff proposes amendments which provide for excluding anomalous or unusual ambient air quality measurements in areas designated as attainment or unclassified. In addition, the staff proposes several minor technical revisions to clarify current practices, delete unnecessary or obsolete language, make the language of the regulations internally consistent, and correct grammatical errors. The proposed amendments are summarized in subsection 2, below.

In addition to the requirement under HSC section 39607(e) for establishing and periodically reviewing the designation criteria, HSC section 39608 requires the Board to establish and annually review the area designations (refer to Attachment A). Based on the most recently available three years of air quality data (data collected during 1992 through 1994), the staff recommends several amendments to the area designations. These proposed amendments, which are summarized in subsection 3, below, are based on the designation criteria as they are proposed to be amended in Chapter II of this Staff Report.

In addition to the proposed amendments to the designation criteria and to the area designations, the staff recommends amending the description of the Kern County portion of the boundary line separating the San Joaquin Valley and Southeast Desert Air Basins. The proposed amendments are summarized in subsection 4, below, and are based on recommendations from the affected air pollution control districts.

Finally, this Staff Report includes maps and tables of the area designations for both the State and national ambient air quality standards (refer to Attachment H). This information is required under section 40718

of the HSC (refer to Attachment A). The maps and tables provided in Attachment H reflect the area designations for State standards as proposed in Chapter III of this Staff Report.

2. Proposed Amendments to the Designation Criteria

The amendments proposed to the designation criteria (California Code of Regulations (CCR), Title 17, sections 70300 through 70306 and Appendices 1 through 4, thereof) would make the following substantive changes to the regulations:

- o Amend Appendix 2 to include a third type of highly irregular or infrequent event called an **unusual concentration event**. Exceedances affected by an unusual concentration event would be identified only for areas already designated as attainment or unclassified, and such exceedances would be excluded from consideration in the area designation process. To be identified as affected by an unusual concentration event, the Executive Officer must find (based on relevant information) that the impact of the affected exceedance is limited to the local area, the exceedance is not expected to recur, and that the data do not support a nonattainment designation. As proposed, an area could retain its attainment or unclassified designation for up to three consecutive years even though a State standard has been exceeded, if the exceedance(s) are found to have been affected by an unusual concentration event.

In addition to the above proposed amendments, the staff proposes several minor technical revisions to Appendix 2 and to sections 70303, 70303.5, 70304, and 70306 of the designation criteria. These proposed revisions would not change the current application of the designation criteria. Rather, they would provide clarification of current practices, delete unnecessary or obsolete language, make the language of the regulations internally consistent, and correct grammar. The proposed minor revisions would make the following changes to the regulations:

- o Reorganize Appendix 2 to make the procedures easier to follow, revise the current language to clarify the functions of the Executive Officer, and make grammatical corrections.
- o Revise section 70303(a)(1) to clarify that only the air quality measurement(s) used in making a nonattainment designation must be representative, not the entire body of data collected in the area.

- o Revise sections 70303(b) and (c)(1) to reflect exceedances rather than violations when referring to data affected by highly irregular or infrequent events.
- o Revise section 70303(c) to delete the obsolete reference to July 15, 1990, as the first date to request a nonattainment-transitional designation for pollutants other than ozone and correct grammar.
- o Revise sections 70303(c)(1) and (2) to clarify that each site in an area is considered individually in determining whether the area qualifies for the nonattainment-transitional designation for pollutants other than ozone.
- o Revise section 70303.5 to make the language of the regulations internally consistent by referring to the State Board as the entity that evaluates the nonattainment-transitional designations for ozone.
- o Revise section 70304(c) to delete the redundant reference to the State Board with respect to the Screening Procedure for Determining Attainment Designations for Areas with Incomplete Air Quality Data.
- o Revise section 70306(b) to delete the obsolete reference to May 1, 1990, as the first date to request a change in an area designation or submit information to be considered in the annual review of the area designations.

3. Proposed Amendments to the Area Designations

The proposed amendments to the area designations (CCR, Title 17, sections 60200 through 60209) would make the following changes to the regulations:

- o Redesignate Northern Sonoma County in the North Coast Air Basin as attainment for ozone. Currently, this portion of Sonoma County is designated as unclassified for ozone.
- o Redesignate Mono County in the Great Basin Valleys Air Basin as nonattainment for ozone. Currently, Mono County is designated as nonattainment-transitional for ozone.
- o Redesignate Sutter County in the Sacramento Valley Air Basin as attainment for carbon monoxide. Currently, Sutter County is designated as unclassified for carbon monoxide.

- o Redesignate Inyo County in the Great Basin Valleys Air Basin as attainment for carbon monoxide. Currently, Inyo County is designated as unclassified for carbon monoxide.
- o Redesignate the Sacramento County Portion of the Census Bureau Urbanized Area in the Sacramento Valley Air Basin as nonattainment-transitional for carbon monoxide. Currently, this portion of the Census Bureau Urbanized Area is designated as nonattainment, while the remainder of Sacramento County is designated as attainment for carbon monoxide.
- o Redesignate the city of Calexico in Imperial County, Southeast Desert Air Basin, as nonattainment for carbon monoxide. Currently, all of Imperial County is designated as unclassified for carbon monoxide.
- o Redesignate the South Coast Air Basin as attainment for nitrogen dioxide. Currently, the South Coast Air Basin is designated as nonattainment for nitrogen dioxide.

4. Proposed Amendments to the San Joaquin Valley and Southeast Desert Air Basin Boundaries

The proposed amendments to the Kern County portion of the San Joaquin Valley and Southeast Desert Air Basin boundaries (CCR, Title 17, sections 60107(h) and 60109(e)) would make the following changes to the regulations:

- o Revise the Kern County portion of the common boundary line to include the Kern River Valley and the Cummings Valley in the Southeast Desert Air Basin. Currently, these two areas are part of the San Joaquin Valley Air Basin.

B. RECOMMENDATION

The staff recommends the Board adopt the proposed amendments to the designation criteria regulations, the proposed amendments to the area designation regulations, and the proposed amendments to the air basin boundary regulations. The full text of the proposed amendments is given in Attachments B, C, and D to this Staff Report.

CHAPTER I

BACKGROUND

A. INTRODUCTION

This chapter gives some background information on the criteria used in making the area designations and on the area designations themselves. The following sections describe the legal requirements, the criteria used to make the area designations, the implications of being redesignated, and the area designation review process.

B. LEGAL REQUIREMENTS

HSC section 39607(e) requires the Board to establish and periodically review the criteria for designating areas as nonattainment or attainment for the State ambient air quality standards (State standards; refer to Attachment A). The Board originally adopted the required designation criteria in June of 1989. The Board subsequently amended the designation criteria in June 1990, May 1992, December 1992, and November 1993.

HSC section 39608 requires the Board to use the designation criteria in designating areas of California as nonattainment or attainment with respect to the State standards (refer to Attachment A). Areas that cannot be designated as nonattainment or attainment are designated as unclassified. The area designations are made on a pollutant-by-pollutant basis for all pollutants listed in the CCR, Title 17, section 70200. The nine affected pollutants are ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, suspended particulate matter (PM10), sulfates, lead, hydrogen sulfide, and visibility reducing particles. HSC section 39608 requires the Board to review the area designations each year and to update them as new information becomes available.

In addition to making the area designations for State standards, HSC section 40718 requires the Board to publish maps showing the areas with one or more measured violations of any State or national ambient air quality standard (refer to Attachment A). The maps and summary tables provided in Attachment H to this Staff Report fulfill this requirement. The maps and tables for the State standards reflect the proposed amendments to the area designations as described in Chapter III of this Staff Report. The maps and summary tables for the national standards reflect the current federal area designations, as promulgated by the United States Environmental Protection Agency.

C. SUMMARY OF THE DESIGNATION CRITERIA

1. General Provisions

The designation criteria describe the procedures the Board must use in determining an area's designation status with respect to the State standards (refer to Attachment E). In summary, the designation criteria specify:

- o The data the Board will use for making the area designations;
- o How the Board will determine whether an area qualifies for designation as nonattainment, attainment, or unclassified;
- o How the Board will determine the size of designated areas; and
- o The requirement for an annual review of the area designations by the Board's Executive Officer.

2. Data to Use

To the extent possible, the Board makes area designations for each pollutant based on recent ambient air quality data. The air quality data must be data for record, which are those air quality data that satisfy specific siting and quality assurance procedures established by the United States Environmental Protection Agency. Generally, data for record are those data collected by or under the direction of the Board and the air pollution control or air quality management districts (districts). When adequate, recent air quality data are not available, the Board may use other types of information to determine an appropriate area designation. These other types of information may include historical air quality data, emission data, meteorological or topographical data, and data relating to the characteristics of population or emissions.

3. Highly Irregular or Infrequent Events

When area designations for State standards are based on ambient air quality data, the designation criteria provide for excluding rare values. In particular, the designation criteria provide for excluding exceedances affected by highly irregular or infrequent events because it is not reasonable to mitigate these exceedances through the regulatory process. Appendix 2 to the designation criteria (refer to Attachment E) currently defines two types of highly irregular or infrequent events:

- o Exceptional events, and
- o Extreme concentration events.

An exceptional event is a specific, identifiable event that is beyond reasonable regulatory control and causes an exceedance of a State standard. An exceptional event may be caused by an act of nature (for example, a severe wind storm or forest fire) or it may be of human origin (for example, a chemical spill or industrial accident).

An extreme concentration event may not have a specific, identifiable cause, but is identified by a statistical procedure which calculates the concentration that is not expected to recur more frequently than once per year. This value commonly is referred to as the Expected Peak Day Concentration. Adverse meteorology is one potential cause of an extreme concentration event. Measured concentrations that are higher than the Expected Peak Day Concentration are identified as extreme concentrations and are excluded from the area designation process.

A pollutant-specific, Expected Peak Day Concentration is calculated for each monitoring site using air quality data measured at the site during a three-year period. The site-specific Expected Peak Day Concentrations for ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, PM10, sulfates, lead, and hydrogen sulfide are listed in Attachment F. These Expected Peak Day Concentrations are based on air quality data for 1992 through 1994. This is the most recent three-year period for which data are available and the same three-year period used in reviewing the area designations as described in this Staff Report. Note that Expected Peak Day Concentrations are not given for visibility reducing particles because data are not available for calculating the Expected Peak Day Concentrations for this pollutant.

4. Size of Designated Areas

The size of the area designated for a pollutant may vary depending on the nature of the pollutant, the location of contributing emission sources, the meteorology, and the topographic features. Normally, an air basin is the area designated for ozone, nitrogen dioxide, PM10, sulfates, and visibility reducing particles. A county (or the portion of a county located within an air basin) normally is the area designated for carbon monoxide, sulfur dioxide, lead, and hydrogen sulfide. In both cases, however, the Board may designate a smaller area if the Board finds that the smaller area has distinctly different air quality. This finding is based on a review of the air quality data, meteorology, topography, and the distribution of population and emissions. Sources with emissions that contribute to a violation must be included within the smaller area. To the extent practicable, the Board uses political boundary lines to define a smaller designated area.

5. Designation Categories

The designation criteria specify three major designation categories: nonattainment, attainment, and unclassified. The Board will designate an area as nonattainment for a pollutant if air quality data show that a State standard for the pollutant was violated at least once during the previous three calendar years.¹ Exceedances that are affected by highly irregular or infrequent events are not considered violations of a State standard and are not used as a basis for designating areas as nonattainment.

The designation criteria specify a subcategory of nonattainment which is called nonattainment-transitional. The Board will designate an area as nonattainment-transitional for a pollutant other than ozone if air quality data show that a State standard for that pollutant was violated two or fewer times at each of the sites in the area during the previous calendar year. In addition, an evaluation of recent air quality data trends and meteorological and emission data must show that air quality either has stabilized or has improved. Finally, each site in the area must be expected to reach attainment for the pollutant within three years.

The nonattainment-transitional designation also can apply for ozone. Under HSC section 40925.5(a), the nonattainment-transitional designations for ozone are made by operation of law (refer to Attachment A). Specifically, an area is designated as nonattainment-transitional for ozone by operation of law if air quality data show that the State ozone standard was exceeded three or fewer times at each of the sites in the air basin during the most recent year for which air quality data are available. The Board has adopted guidelines to use in evaluating whether an area satisfies the requirements of HSC section 40925.5(a). These guidelines are specified in section 70303.5 of the designation criteria (refer to Attachment E).

The Board will designate an area as attainment for a pollutant if the data show that the State standard for that pollutant was not violated during the previous three calendar years. Again, exceedances affected by highly irregular or infrequent events are not considered violations and, therefore, are not considered in the area designation process. As a result, an area may have measured concentrations that exceed a State standard and still be designated as attainment. Finally, the Board will designate an area as unclassified for a pollutant if the available data do not support a designation of nonattainment or attainment.

-
1. The terms "exceedance" and "violation" are used throughout this Staff Report. Because the two terms are closely related, they can be confusing. In this report, the term "exceedance" refers to a measured pollutant concentration that is higher than the concentration of a State standard. The term "violation" refers to an exceedance that was not affected by a highly irregular or infrequent event (see Attachment E). Only violations are considered in the area designation process.

D. IMPLICATIONS OF THE AREA DESIGNATIONS

1. Areas Redesignated as Nonattainment

A district that includes an attainment or unclassified area that is redesignated as nonattainment (a nonattainment district) experiences two principal consequences under the law. First, State law requires the nonattainment districts for four pollutants (ozone, carbon monoxide, nitrogen dioxide, and sulfur dioxide) to develop plans for attaining the State standards for these pollutants. The nonattainment districts must submit these attainment plans to the Board for approval (HSC section 40911). Ozone nonattainment districts that are impacted by transport from upwind areas (in other words, ozone violations are caused by emissions transported from upwind areas located outside the district) are required to develop ozone attainment plans for mitigation only of violations that would occur in the absence of the transport contribution (HSC sections 39610(b) and 40912). In this case, the responsible upwind district(s) would be responsible for mitigating the ozone violations in the downwind nonattainment area that are caused by overwhelming transport (CCR, Title 17, Subchapter 1.5, Article 6, section 70600).

A district with an area that is redesignated as nonattainment for any of the remaining five pollutants--PM10, sulfates, lead, hydrogen sulfide, or visibility reducing particles--is not subject to any specific statutory planning requirements. However, such districts must adopt and enforce rules and regulations to expeditiously attain the State standards for these five pollutants (HSC section 40001). Furthermore, a nonattainment district may develop and implement an attainment plan or adopt regulations to control the emissions that contribute to these pollutants (HSC section 40926).

The second consequence of a nonattainment designation is that the State Board may require a nonattainment district to collect additional permit fees from large, nonvehicular sources located in the nonattainment area (HSC section 39612 and CCR, Title 17, section 90800 through 90803). Only those sources which are authorized by district permit to emit 500 tons per year or more of any nonattainment pollutant or their precursors are subject to the additional permit fees. The fees are used to help defray the costs of State programs related to nonvehicular sources and implemented under the California Clean Air Act of 1988 (Stats. 1988, ch. 1568). With certain exceptions, nonattainment districts also are authorized to levy a fee of up to \$4.00 on motor vehicles registered in the district for the purposes of California Clean Air Act implementation (HSC sections 44223 and 44225).

2. Areas Redesignated as Nonattainment-Transitional

Nonattainment-transitional is a subcategory of the nonattainment designation. Therefore, a district with an area that is redesignated as nonattainment-transitional is subject to the same legal requirements as a nonattainment district (refer to discussion in subsection 1, above).

However, in contrast to the simple nonattainment designation, nonattainment-transitional status may signal a change in how these legal requirements are implemented. For example, a district that currently is implementing an approved attainment plan may determine that some of the additional control measures contained in the attainment plan are not needed to reach attainment by the earliest practicable date. As a result, nonattainment-transitional status provides the district with a signal that it may be appropriate to review and perhaps modify its approved attainment plan. District actions in response to a nonattainment-transitional designation must be consistent with State and federal regulations and statutes. HSC section 40925.5 specifically allows a district with an area designated as nonattainment-transitional for ozone to shift some stationary source control measures from the rulemaking calendar to the contingency category if the district finds these control measures no longer are necessary to accomplish expeditious attainment of the State ozone standard. These actions are subject to the Board's review and approval and do not apply to control measures required to mitigate the effects of pollutant transport.

3. Areas Redesignated as Attainment or Unclassified

State law does not impose any specific planning requirements upon districts with areas redesignated as attainment or unclassified. However, State law does require that the State standards not only be attained but also, maintained. State law requires the districts and the Board to make a coordinated effort to protect and enhance the ambient air quality. As part of this effort, the districts must adopt rules and regulations sufficiently effective to attain and maintain the State standards (HSC sections 39001, 40001, and 41500).

E. AREA DESIGNATION REVIEW PROCESS

Both the HSC (section 39608(c)) and the designation criteria (CCR, Title 17, section 70306) require the Board to review the area designations annually and to redesignate areas as new information becomes available (refer to Attachments A and E, respectively). As part of this review process, the staff distributed two notices.

On March 20, 1995, the staff sent a letter to all districts notifying them of the May 1, 1995, deadline for requesting a change in an area's designation, submitting information for consideration in the annual review process, or requesting a nonattainment-transitional designation for pollutants other than ozone. Note that the nonattainment-transitional designations for ozone are made by operation of law, rather than by the Board, so a formal district request is not needed.

On July 5, 1995, the staff distributed a general announcement for a public consultation meeting held July 31, 1995. This announcement included a discussion of the staff's proposed amendments to the designation criteria. It also included a table summarizing the staff's proposed redesignations. As required by the designation criteria, the proposed area redesignations are based on the staff's review of the air quality data collected during the most recent three calendar years--1992 through 1994. They also reflect the proposed amendments to the designation criteria as described in Chapter II of this Staff Report.

CHAPTER II

PROPOSED AMENDMENTS TO THE DESIGNATION CRITERIA

A. INTRODUCTION

This chapter describes the proposed amendments to the designation criteria. The proposed amendments mainly affect Appendix 2: Air Resources Board Procedure for Reviewing Air Quality Data Possibly Affected by a Highly Irregular or Infrequent Event. The current requirements of Appendix 2 and the specifics of the proposed amendments are described in Section B, below. The staff also proposes several minor technical revisions to clarify the application of Appendix 2 and correct grammatical errors. These minor revisions also are described in Section B, below.

In addition to these amendments, the staff proposes a number of minor technical revisions to sections 70303, 70303.5, 70304, and 70306 of the designation criteria. These minor revisions do not modify the application of these sections of the designation criteria. Rather, they clarify the intent of the provisions, delete unnecessary or obsolete language, make the language of the regulations internally consistent, and correct grammatical errors. These minor revisions are described in Section C, below.

B. APPENDIX 2: PROCEDURE FOR REVIEWING AIR QUALITY DATA POSSIBLY AFFECTED BY A HIGHLY IRREGULAR OR INFREQUENT EVENT

1. Current Requirements

The designation criteria currently provide for excluding from the area designation process, exceedances affected by highly irregular or infrequent events. The procedures for identifying data affected by such events are set forth in Appendix 2 to the designation criteria. Appendix 2 defines two types of highly irregular or infrequent events:

- o Exceptional events, and
- o Extreme concentration events

An exceptional event is a specific, identifiable event that is beyond reasonable regulatory control and causes an exceedance of a State standard. An exceptional event may be caused by an act of nature (for example, a severe wind storm, forest fire, or volcanic eruption) or it may be of human origin (for example, a chemical spill or industrial accident). An extreme concentration event may not have a specific, identifiable cause but is defined as a concentration that statistically is expected to occur less frequently than once per year, on average. Adverse meteorology is one potential cause of an extreme concentration event. The Board excludes from the area designation process all exceedances affected by highly irregular or infrequent events because such exceedances are not reasonable to mitigate through a regulatory control program.

2. Discussion of Proposed Amendments

The staff proposes amending Appendix 2 to include a third type of highly irregular or infrequent event called the unusual concentration event. An unusual concentration event would be defined as an event which causes an anomalous exceedance of a State standard and which cannot be identified as an exceptional event or an extreme concentration event. Exceedances affected by an unusual concentration event would be excluded from the area designation process. Note that although exceedances affected by an unusual concentration event are excluded from the area designation process, such exceedances are included in the computational procedure for identifying exceedances affected by an extreme concentration event as defined in Appendix 2 to the designation criteria.

Exceedances affected by an unusual concentration event would be identified only for areas designated as attainment or unclassified at the time the exceedance occurred. For both attainment and unclassified areas, the Executive Officer would consider information related to the possible event, including (but not limited to) the amount and characteristics of the air quality data, the related emission and meteorological data, the potential impacts on public health and welfare, and any applicable rules or regulations that might influence future ambient concentrations. Based on a review of the relevant information, the Executive Officer would need to find that the impact of the exceedance is limited to the local area, the exceedance is not expected to recur, and the data are not sufficient to support a nonattainment designation.

Similar to the extreme concentration event, exceedances possibly affected by an unusual concentration event would be evaluated on a site-by-site basis. As proposed, an area could retain its attainment or unclassified designation based on the exclusion of one or more exceedances affected by an unusual concentration event for up to three consecutive years. These exceedances could occur at different sites during the three-year period. If an exceedance possibly affected by an unusual concentration event occurred at any site in an area during the fourth consecutive year, the Board would redesignate the area as nonattainment.

There are several examples which show how the unusual concentration event might be used in the area designation process. One example occurred last year in the Southeast Desert Air Basin. Nitrogen dioxide monitoring was initiated at the Trona-Athol site in San Bernardino County during 1993. In May 1993, a very high one-hour concentration, 0.36 ppm, was measured. This value exceeded the State nitrogen dioxide standard. The second highest concentration measured at this site during 1993 was only 0.05 ppm. During last year's review of the area designations, this apparently anomalous concentration could not be excluded as an exceptional event because the staff could not document the occurrence of anything unusual at the time of the exceedance. The value also could not be excluded as an extreme concentration event because the available data were not sufficient for calculating an Expected Peak Day Concentration.

Under the proposed amendments, this single anomalous exceedance could be excluded as an unusual concentration event. Based on a review of air quality and emission data, the exceedance appears to be limited to the local area. In addition, because the concentration is so far above the remaining data, it is unlikely to recur. Moreover, a single exceedance in an area designated as attainment does not represent an increased impact on public health and welfare because the current regulations already allow, by virtue of the extreme concentration event procedure, the exclusion of one exceedance per year, on average. Based on these findings, the single exceedance would not, by itself, provide sufficient basis for a nonattainment designation.

During this year's review of the area designations, additional nitrogen dioxide data were available for the Trona-Athol monitoring site, and the staff was able to calculate an Expected Peak Day Concentration. The 1993 value (0.36 ppm) is higher than the rounded Expected Peak Day Concentration (0.07 ppm) and, therefore, is excluded as an extreme concentration event. This confirms the anomalous nature of the exceedance and the appropriateness of the proposed amendments as a mechanism for excluding such exceedances.

Ozone data measured in the Great Basin Valleys Air Basin provide a second example of how the unusual concentration event might be used. Currently, Inyo County in the Great Basin Valleys Air Basin is designated as unclassified for the State ozone standard. During December 1993, the National Park Service initiated ozone monitoring at a site located at the Death Valley National Monument. These data show one exceedance of the State ozone standard during May 1994. The staff cannot document an exceptional event associated with the exceedance. Furthermore, because the data are limited, the staff cannot calculate a reliable Expected Peak Day Concentration and possibly exclude the measurement as an extreme concentration event.

Under the proposed amendments, the exceedance could be excluded as an unusual concentration event. Based on a review of air quality and emission data, the impact of the exceedance appears to be limited to the local area. Furthermore, the air quality data that are available, although limited, do not indicate that the exceedance is likely to recur. Because the level of the exceedance is close to the level of the State ozone standard and the exceedance occurred only for one hour, the staff does not expect this exceedance would have any quantifiable impact on public health and welfare. As a result, the single exceedance does not provide sufficient basis for a nonattainment designation. Identifying this single exceedance as affected by an unusual concentration event would allow Inyo County to maintain its unclassified designation for ozone. However, the staff would reevaluate the appropriateness of the unclassified designation during the next review of the area designations, when additional data are available.

In addition to the amendments described above, the staff recommends several minor technical revisions to Appendix 2. First, the staff recommends reorganizing Appendix 2. The proposed reorganization would put the specific steps for identifying each type of highly irregular or infrequent event directly under the general description of that event. This proposed reorganization would make the procedure easier to follow. Second,

the staff recommends clarifying the role of the Executive Officer in identifying data pursuant to Appendix 2. The current language in the steps for identifying data affected by a highly irregular or infrequent event refers interchangeably to the Executive Officer and the State Board. However, when the designation criteria originally were drafted and as stated in the first paragraph of Appendix 2, the Executive Officer makes all decisions regarding the identification of data pursuant to Appendix 2. Evaluating exceedances to determine whether they were affected by a highly irregular or infrequent event can be a very detailed and laborious process. This work is more appropriately completed by the Board staff than by the Board itself. Therefore, to clarify the intent and to maintain internal consistency, the staff recommends amending the procedures in Appendix 2 to reference the Executive Officer.

Next, the staff recommends replacing the reference to "violations" in the second paragraph of Appendix 2 with the word "exceedances." This paragraph describes the type of data that the Executive Officer will review under Appendix 2. The proposed revision is appropriate because all concentrations that are higher than the level of a State standard are exceedances. Only those that are not identified as affected by a highly irregular or infrequent event are considered violations. Finally, the staff recommends several revisions to clarify the procedures in Appendix 2 and correct grammatical errors. These minor revisions, which are shown in Attachment B to this Staff Report, do not change the current application of the procedures set forth in Appendix 2.

3. Staff Recommendation

The staff recommends the Board adopt the proposed amendments to Appendix 2 to the designation criteria. The full text of the proposed amendments is shown in Attachment B to this Staff Report.

C. OTHER MINOR TECHNICAL REVISIONS

1. Section 70303

Section 70303 of the designation criteria specifies the criteria for designating an area as nonattainment. The staff proposes several minor revisions to this section.

The first proposed revision affects section 70303(a)(1). This section states that the data used in designating an area as nonattainment must be representative. The current language could be interpreted to mean that the entire body of data collected in the area must be representative. In practice, however, the representativeness criteria apply only to those measurements that show violations of a State standard because these are the data that provide the basis for the nonattainment designation. To clarify this intent, the staff proposes revising section 70303(a)(1) as shown, below:

(1) Data for record show at least one violation of a state standard for that pollutant in the area, and the measurement of the violation meets the representativeness criteria set forth in "Criteria for Determining Data Representativeness" contained in Appendix 1 to this article and show at least one violation of a state standard for that pollutant in the area; or

The second proposed revision affects the first sentence of section 70303(b). The current language states that a nonattainment designation will not be based on violations affected by highly irregular or infrequent events. However, as defined in the designation criteria, a violation is a concentration that is above the level of the State standard and is not affected by a highly irregular or infrequent event. In contrast, an exceedance is any concentration above the level of a State standard including those affected by highly irregular or infrequent events. To maintain consistency with this definition, the staff proposes replacing the word "violations" with the word "exceedances," as shown, below:

(b) An area shall not be designated as nonattainment if the only recorded violation(s) exceedance(s) of that standard were based solely on data for record determined to be affected by a highly irregular or infrequent event. Data affected by a highly irregular or infrequent event will be identified as such by the executive officer in accordance with the "Air Resources Board Procedure for Reviewing Air Quality Data Possibly Affected by a Highly Irregular or Infrequent Event," set forth in Appendix 2 to this article.

The third proposed revision affects section 70303(c). This section specifies the procedure for requesting an area redesignation for nonattainment-transitional and describes which pollutants qualify for this designation category. The current language cites July 15, 1990, as the first date to submit requests for the nonattainment-transitional designation. This date no longer is relevant and, therefore, the staff proposes it be deleted. In addition, the staff recommends two minor revisions to provide clarification and correct grammar. The proposed revision is given, below:

(c) The state board shall, if requested by a the district no later than July 15, 1990 or no later than May 1 of each year thereafter pursuant to section 70306, identify that portion of a designated area within the district as nonattainment-transitional for a pollutant other than ozone with a standard averaging time less than or equal to 24 hours and for which samples are routinely collected every day if it finds that:

The last proposed revision affects sections 70303(c)(1) and (2). These sections specify the criteria for designating an area as nonattainment-transitional for a pollutant other than ozone. The nonattainment-transitional designation is a subcategory of the nonattainment designation. Sections 70303(c)(1) and (2) state several conditions an area must satisfy in order to qualify for the nonattainment-transitional designation. In practice, the Board applies these conditions on a site-by-site basis. In other words, each site in the area must satisfy both requirements before the area can be considered eligible for the nonattainment-transitional designation. To clarify this intent, the staff proposes revising sections 70303(c)(1) and (2) to read as shown, below. In addition, the staff proposes replacing the word "violations" in section 70303(c)(1) with the word "exceedances" to provide internal consistency among the designation criteria (refer to discussion of proposed revisions to section 70303(b), on previous page).

(1) Data for record for the previous calendar year are consistent with the criteria established in section 70304(a)(2) and show two or fewer days at all each sites in the area with violations of a state standard for that pollutant (not including ~~violations~~ exceedances found to be affected by a highly irregular or infrequent event under the procedure set forth in Appendix 2);

(2) Evaluation of multi-year air quality, meteorological and emission data indicates that ambient air quality either has stabilized or is improving and that every site in the area is expected to reach attainment within three years; and

2. Section 70303.5

Section 70303.5 of the designation criteria contains the guidelines for evaluating whether a district meets the requirements of the nonattainment-transitional designation for ozone. Note that the nonattainment-transitional designations for ozone are not made by the Board, but are made by operation of law. The current language of section 70303.5 makes reference to the Board, while all other sections of the designation criteria make reference to the State Board. Therefore, to make the language of the regulations internally consistent, the staff proposes revising section 70303.5 to reference the State Board. The proposed revision is shown, below:

In evaluating whether a district meets the requirements of HSC 40925.5, the state board shall use the following guidelines:

3. Section 70304

Section 70304 of the designation criteria contains the criteria for designating an area as attainment. The current language of section 70304(c) refers to the State Board's "Screening Procedure for Determining Attainment Designations for Areas with Incomplete Air Quality Data." In this instance, the reference to the State Board with respect to the screening procedure is unnecessary. Therefore, the staff proposes deleting the reference. The proposed revision is shown, below:

(c) Where an area has limited or no air quality data for nitrogen dioxide, sulfur dioxide, sulfates, and lead (particulate), the state board shall designate that area attainment for a pollutant if it finds that no state standard for that pollutant has been violated in that area based on the ~~state board's~~ "Screening Procedure for Determining Attainment Designations for Areas with Incomplete Air Quality Data" set forth in Appendix 4 to this article.

4. Section 70306

Section 70306 specifies the requirements for an annual review of the area designations. The current language cites May 1, 1990, as the first date to submit requests or information to be considered in the annual review. This date no longer is relevant. Therefore, the staff proposes it be deleted. The proposed revision is shown, below:

(b) Any request for a change in a designation and any submittal of information for purposes of the executive officer's consideration in the annual review of a designation shall be provided in writing to the executive officer no later than May 1 of each year ~~commencing with~~ **May 1, 1990.**

5. Staff Recommendation

The staff recommends the Board adopt the proposed minor technical revisions to sections 70303, 70303.5, 70304, and 70306 of the designation criteria. These proposed revisions do not change the current application of the designation criteria. Rather, they provide clarification of current practices, delete unnecessary or obsolete language, make the language of the regulations internally consistent, and correct grammatical errors. The full text of the proposed revisions is shown in Attachment B to this Staff Report.

1944-1945

1. The first part of the report deals with the general situation in the country during the year 1944-1945. It is noted that the country has experienced a period of relative stability and economic growth, although there are still some difficulties in the way of progress.

2. The second part of the report deals with the financial situation of the country. It is noted that the government has managed to maintain a balanced budget and to reduce the public debt. The report also mentions the progress of the national economy and the increase in the production of goods and services.

1946-1947

1. The first part of the report deals with the general situation in the country during the year 1946-1947. It is noted that the country has experienced a period of relative stability and economic growth, although there are still some difficulties in the way of progress.

2. The second part of the report deals with the financial situation of the country. It is noted that the government has managed to maintain a balanced budget and to reduce the public debt. The report also mentions the progress of the national economy and the increase in the production of goods and services.

1948-1949

1. The first part of the report deals with the general situation in the country during the year 1948-1949. It is noted that the country has experienced a period of relative stability and economic growth, although there are still some difficulties in the way of progress.

2. The second part of the report deals with the financial situation of the country. It is noted that the government has managed to maintain a balanced budget and to reduce the public debt. The report also mentions the progress of the national economy and the increase in the production of goods and services.

CHAPTER III

PROPOSED AMENDMENTS TO THE AREA DESIGNATIONS

A. INTRODUCTION

This chapter describes and explains the proposed amendments to the area designations. The proposed area redesignations are consistent with the designation criteria established in CCR, Title 17, sections 70300 through 70306, as they are proposed to be amended in Chapter II of this Staff Report.

The proposed redesignations are based on air quality data for record as defined in section 70301 of the designation criteria. The air quality data used for redesignating an area as nonattainment must be representative of the averaging time specified in the State standard. The air quality data used for redesignating an area as attainment or nonattainment-transitional also must be representative, and the air quality data must be complete. The specific requirements for evaluating data representativeness and data completeness are given in Appendices 1 and 3, respectively, to the designation criteria (refer to Attachment E).

As required by the designation criteria, the staff reviewed the air quality data collected during the three-year period of 1992 through 1994. Based on these data, redesignations are appropriate only for three of the nine pollutants for which the Board makes area designations. The affected pollutants are: ozone, carbon monoxide, and nitrogen dioxide. Based on the 1992 through 1994 data, no action is proposed for the remaining six pollutants: sulfur dioxide, PM10, sulfates, lead, hydrogen sulfide, and visibility reducing particles. Therefore, the current area designations for these six pollutants would remain unchanged.

Sections B, C, and D of this chapter describe the areas and circumstances for which the staff is proposing redesignations. Section E describes the areas where air quality data would appear to signal a change in the area designation but which, for various reasons, the staff does not recommend a redesignation.

B. PROPOSED AREA REDESIGNATIONS FOR OZONE

The State standard for ozone is a one-hour average concentration of 0.09 parts per million (ppm). This concentration is not to be exceeded (CCR, Title 17, section 70200). Based on air quality data for 1992 through 1994, two areas qualify for redesignation for ozone. These areas are Northern Sonoma County in the North Coast Air Basin and Mono County in the Great Basin Valleys Air Basin.

1. Northern Sonoma County (Unclassified to Attainment)

Currently, Northern Sonoma County in the North Coast Air Basin is designated as unclassified for the State ozone standard. The remainder of the Air Basin is designated as attainment for ozone.

During 1992 through 1994, the Northern Sonoma County Air Pollution Control District conducted monitoring at the Healdsburg-Municipal Airport site. During October 1994, a one-hour ozone concentration of 0.10 ppm was measured at this site. Based on ozone data collected during 1992 through 1994, the rounded Expected Peak Day Concentration for the Healdsburg-Municipal Airport site is 0.09 ppm. Because the measured exceedance is higher than the rounded Expected Peak Day Concentration, the exceedance qualifies as an extreme concentration event and is excluded from the designation process. Furthermore, the characteristics of the population and emissions in Northern Sonoma County indicate that the ozone data collected at this site represent an area of expected high concentrations.

Based on the 1992 through 1994 ozone data collected at the Healdsburg-Municipal Airport site, the staff recommends the Board redesignate Northern Sonoma County (along with the remainder of the North Coast Air Basin) as a single attainment area for ozone. This proposed redesignation is based on the provisions in CCR, Title 17, section 70304(a) and affects CCR, Title 17, section 60201.

2. Mono County (Nonattainment-Transitional to Nonattainment)

Currently, Mono County in the Great Basin Valleys Air Basin is designated as nonattainment-transitional for the State ozone standard. This designation occurred last year by operation of law, based on data collected at the Mammoth Lakes site during 1993. These 1993 data showed no exceedances of the State ozone standard.

Although there were no ozone exceedances at the Mammoth Lakes site during 1993, data for 1992 and 1994 show nineteen days with ozone concentrations that exceed the State standard. The nineteen ozone exceedances range from 0.10 ppm to 0.15 ppm. Four of the nineteen exceedances are higher than the rounded Expected Peak Day Concentration of 0.12 ppm. These four exceedances qualify as extreme concentration events and, therefore, are not considered violations of the State ozone standard. However, the remaining fifteen exceedances are considered violations of the State ozone standard. Because of these numerous violations, Mono County no longer qualifies for the ozone nonattainment-transitional designation.

Based on the 1992 through 1994 ozone data collected at the Mammoth Lakes site, the staff recommends the Board redesignate Mono County as nonattainment for ozone. This proposed redesignation is based on the provisions in CCR, Title 17, section 70303(a) and affects CCR, Title 17, section 60201.

C. PROPOSED AREA REDESIGNATIONS FOR CARBON MONOXIDE

There are three State standards for carbon monoxide (CO)--a one-hour average standard and two eight-hour average standards. The one-hour average standard of 20 ppm applies statewide. An eight-hour average standard of 9.0 ppm applies in all areas of California except the Lake Tahoe Air Basin. Both of these State CO standards are not to be exceeded. In the Lake Tahoe Air Basin, a more stringent, eight-hour standard of 6 ppm, not to be equalled or exceeded, applies (CCR, Title 17, section 70200).

Several areas of the State showed exceedances of the State 8-hour CO standards during 1992 through 1994. However, with the exception of two monitoring sites in the South Coast Air Basin (Lynwood and La Habra) and one monitoring site in the Southeast Desert Air Basin (Calexico) there were no exceedances of the State one-hour CO standard in any area of the State during 1992 through 1994.

Based on air quality data from 1992 through 1994, four areas qualify for redesignation for the State CO standards. These areas are: Sutter County in the Sacramento Valley Air Basin, Inyo County in the Great Basin Valleys Air Basin, the Sacramento County Portion of the Census Bureau Urbanized Area in the Sacramento Valley Air Basin, and the city of Calexico in the Southeast Desert Air Basin.

1. Sutter County (Unclassified to Attainment)

Sutter County is located in the Sacramento Valley Air Basin. Currently, Sutter County is designated as unclassified for the State CO standards.

During 1992 through 1994, the staff conducted monitoring at a site in Yuba City. No exceedances of the State CO standards were measured. Furthermore, the characteristics of the population and emissions in Sutter County indicate that the CO data collected at the Yuba City site represent an area of expected high concentrations.

Based on the 1992 through 1994 CO data collected at the Yuba City site, the staff recommends the Board redesignate Sutter County as attainment for the State CO standards. This proposed redesignation is based on the provisions in CCR, Title 17, section 70304(a) and affects CCR, Title 17, section 60202.

2. Inyo County (Unclassified to Attainment)

Inyo County is located in the Great Basin Valleys Air Basin. Currently, Inyo County is designated as unclassified for the State CO standards.

During 1992 through 1994, the Great Basin Unified Air Pollution Control District conducted monitoring at a site in Bishop. No exceedances of the

State CO standards were measured at this site. Furthermore, the characteristics of the population and emissions in Inyo County indicate that the CO data collected at the Bishop site represent an area of expected high concentrations.

Based on the 1992 through 1994 CO data collected at the Bishop site, the staff recommends the Board redesignate Inyo County as attainment for the State CO standards. This proposed redesignation is based on the provisions in CCR, Title 17, section 70304(a) and affects CCR, Title 17, section 60202.

3. Sacramento County Portion of Census Bureau Urbanized Area (Nonattainment to Nonattainment-Transitional)

By a telephone conversation on June 29, 1995, the Sacramento Metropolitan Air Quality Management District requested that the Sacramento County Portion of the Census Bureau Urbanized Area be redesignated as nonattainment-transitional for the State CO standards. This portion of the Census Bureau Urbanized Area is located in the Sacramento Valley Air Basin and currently is designated as nonattainment for CO. The remainder of Sacramento County is designated as attainment for CO.

During 1992 and 1994, there were no violations of the State CO standards at any site in the Sacramento County Portion of the Census Bureau Urbanized Area. However, during 1993, there was one eight-hour exceedance at the Sacramento-T Street site and one eight-hour exceedance at the Sacramento-El Camino and Watt site. The exceedance at the T Street site (9.38 ppm) is higher than the rounded Expected Peak Day Concentration of 8.5 ppm. Therefore, this exceedance is excluded as an extreme concentration event. In contrast, the exceedance at the El Camino and Watt site (also 9.38 ppm) is less than the rounded Expected Peak Day Concentration of 9.6 ppm. This value cannot be excluded as an extreme concentration event and consequently, represents a violation of the applicable eight-hour State CO standard.

Pursuant to the designation criteria (CCR, Title 17, section 70303(c)) as it is proposed to be amended, the Board may redesignate an area as nonattainment-transitional for a pollutant other than ozone if the following three conditions are satisfied:

1. There were two or fewer days at each site in the area during the previous calendar year with violations of the State standard (excluding data found to be affected by highly irregular or infrequent events);
2. An evaluation of multiple years of data shows that the air quality has stabilized or is improving and every site in the area is expected to reach attainment within three years; and
3. The geographic extent of the area is consistent with the criteria in CCR, Title 17, section 70302.

The air quality data collected at sites in the Sacramento County Portion of the Census Bureau Urbanized Area show that the applicable State CO standards were not violated during 1994. Furthermore, an analysis completed by the staff shows that this area is expected to reach attainment within the allowable three-year period (the details of this analysis are given in Attachment G to this Staff Report).

Based on the 1994 CO data and the results of the staff's attainment analysis, the staff recommends the Board redesignate the Sacramento County Portion of the Census Bureau Urbanized Area as nonattainment-transitional for the State CO standards. This redesignation is based on the provisions in CCR, Title 17, section 70303(c) and affects CCR, Title 17, section 60202. The remainder of Sacramento County would remain designated as attainment for CO.

4. City of Calexico (Unclassified to Nonattainment)

Imperial County is located in the Southeast Desert Air Basin. Currently, Imperial County is designated as unclassified for the State CO standards.

During June 1994, the Board staff began monitoring CO concentrations at a site in Calexico. The CO data collected at the Calexico-Ethel Street site show four exceedances of the State one-hour CO standard and eight exceedances of the applicable State eight-hour CO standard during October, November, and December. None of these exceedances can be identified and excluded as a highly irregular or infrequent event. They cannot be excluded as exceptional events because there are no qualifying circumstances associated with the exceedances. They cannot be excluded as extreme concentration events because there are not yet enough data to calculate a reliable Expected Peak Day Concentration for this site. (However, it is important to note that the Expected Peak Day Concentration algorithm is designed to exclude on average, one exceedance per year. So, even if a reliable Expected Peak Day Concentration could be calculated, the staff does not expect the procedure would exclude such a high number of exceedances during a single year.) Finally, given the large number of exceedances and the expectation that they will continue in the future, it would not be appropriate to exclude them as unusual concentration events as proposed in Chapter II of this Staff Report.

At the staff's July 31, 1995, workshop on the proposed amendments to the area designations, the Imperial County Air Pollution Control District (Imperial County District) expressed concern about the staff's proposal to redesignate the city of Calexico as nonattainment for the State CO standards. The district contends that the violations are caused by traffic at a nearby crossing on the California-Mexico border. The district believes that the Mexican vehicles produce more emissions than do similar California vehicles and that this, in combination with the stop-and-go traffic at the

border crossing, contributes significantly to the violations measured at the Calexico site. As a result, the district contends it cannot mitigate the exceedances and should not be designated as nonattainment for CO.

The staff believes a nonattainment designation is appropriate. The area designations are based on ambient air quality and are intended to provide information about the healthfulness of the air quality in each designated area. The nonattainment designation identifies areas with air quality problems so that the planning process can be implemented. Whether the air quality problem is due to local emissions or transport is a planning issue and should be addressed during the planning process. The staff acknowledges that because of the increased vehicle traffic in and around the California-Mexico border and the generally localized nature of CO violations, the CO problem in Calexico likely is limited to the local area. As a result, the staff recommends that only the area within the Calexico city limits be included in the nonattainment area. According to the Imperial County District staff, the Calexico city limits boundary generally is defined as the area that is bounded to the south by the United States/Mexico International Boundary; to the east by a boundary line located 3,000 feet east of Meadows Road; to the north by the Central Main Canal; and to the west by the Southern Pacific Railroad Right-of-Way and the All American Canal.

Based on the CO data collected at the Calexico-Ethel Street site, the staff recommends the Board redesignate the city of Calexico in Imperial County as nonattainment for the State CO standards. This proposed redesignation is based on the provisions in CCR, Title 17, section 70303(a) and affects CCR, Title 17, section 60202. The remainder of Imperial County would remain designated as unclassified for the State CO standards.

D. PROPOSED AREA REDESIGNATION FOR NITROGEN DIOXIDE

The State nitrogen dioxide standard is a one-hour average concentration of 0.25 ppm. This concentration is not to be exceeded (CCR, Title 17, section 70200). Currently, the South Coast Air Basin is the only area of California designated as nonattainment for this pollutant. All other areas of the State are designated as attainment for the State nitrogen dioxide standard.

1. South Coast Air Basin (Nonattainment to Attainment)

During 1992 through 1994, the South Coast Air Quality Management District collected nitrogen dioxide data at a number of sites in the South Coast Air Basin. Only two sites had data showing exceedances of the State nitrogen dioxide standard. Two exceedances occurred at the Pico Rivera site, and one exceedance occurred at the Los Angeles-North Main site. The exceedances at the Pico Rivera site (0.26 ppm and 0.27 ppm) are both higher than the rounded Expected Peak Day Concentration of 0.22 ppm. Similarly,

the exceedance at the Los Angeles-North Main site (0.30 ppm) is higher than the rounded Expected Peak Day Concentration of 0.24 ppm. All three of these exceedances are excluded as extreme concentration events and, therefore, are not considered violations of the State nitrogen dioxide standard. Furthermore, the characteristics of the population and the emissions in the South Coast Air Basin indicate that the nitrogen dioxide concentrations collected at the South Coast Air Basin monitoring sites represent areas of expected high concentrations.

Based on the nitrogen dioxide data collected at sites in the South Coast Air Basin, the staff recommends the Board redesignate the South Coast Air Basin as attainment for nitrogen dioxide. This proposed redesignation is based on the provisions in CCR, Title 17, section 70304(a) and affects CCR, Title 17, section 60203. If the Board adopts this proposed redesignation, all areas of California would be designated as attainment for the State nitrogen dioxide standard.

E. AREAS NOT RECOMMENDED FOR REDESIGNATION

This section describes eight areas of the State that currently are designated as attainment or unclassified, although air quality data collected in these areas during 1992 through 1994 show exceedances of a State standard. The specifics of each case are described, below. The staff does not recommend redesignating these areas because the measured exceedance(s) are excluded as highly irregular or infrequent events under the current and proposed provisions to Appendix 2 of the designation criteria. The eight areas and the affected pollutants are: Lake Tahoe Air Basin (ozone), Inyo County (ozone), Orange County (carbon monoxide), Southeast Desert Air Basin (nitrogen dioxide), San Luis Obispo County (sulfur dioxide), South Coast Air Basin (sulfates), Los Angeles County (lead), and Santa Barbara County (hydrogen sulfide).

1. Lake Tahoe Air Basin - Ozone

The Lake Tahoe Air Basin currently is designated as attainment for the State ozone standard. The State ozone standard is a one-hour average concentration of 0.09 ppm, not to be exceeded (CCR, Title 17, section 70200).

During June 1992, a one-hour ozone concentration of 0.10 ppm was measured at the South Lake Tahoe-3377 Tahoe Blvd site. This concentration exceeds the State ozone standard. Based on ozone data collected during 1992 through 1994, the rounded Expected Peak Day Concentration for this site is 0.09 ppm. Because the measured exceedance is higher than the rounded Expected Peak Day Concentration, the exceedance qualifies as an extreme concentration event and is excluded from the designation process.

The remaining ozone data collected during 1992 through 1994 at sites in the Lake Tahoe Air Basin show no exceedances of the State standard. Therefore, the staff does not recommend any change to the Lake Tahoe Air Basin's attainment designation for the State ozone standard.

2. Inyo County - Ozone

Inyo County in the Great Basin Valleys Air Basin currently is designated as unclassified for the State ozone standard. The State ozone standard is a one-hour average concentration of 0.09 ppm, not to be exceeded (CCR, Title 17, section 70200).

Prior to 1992, there were no ozone data available for Inyo County. However, during 1992 through 1994, the Great Basin Unified Air Pollution Control District collected ozone data at a site in Bishop. These data show no exceedances of the State ozone standard. In addition to the Bishop data, the National Park Service has been collecting ozone data since December 1993, at a site at the Death Valley National Monument. The ozone data for the Death Valley site show one day during May 1994, with a concentration exceeding the State standard. The maximum hourly ozone concentration of 0.098 ppm occurred on May 22. Because the data for the Death Valley monitoring site are limited, a reliable Expected Peak Day Concentration cannot be calculated for this site and, therefore, the exceedance cannot be excluded as an extreme concentration event.

As proposed in Chapter II of this Staff Report, exceedances measured in areas designated as unclassified may qualify for exclusion as unusual concentration events. As proposed, the Board's Executive Officer must find, based on relevant information, that the impact of the exceedance is limited to the local area, the exceedance is not likely to recur, and the data are not sufficient to support a nonattainment designation. Based on a review of air quality and emission data, the impact of the exceedance appears to be limited to the local area. Furthermore, the air quality data that are available, although limited, do not indicate that the exceedance is likely to recur. The level of the exceedance is close to the State standard and the exceedance occurred only for one hour. Because the level of the exceedance is so small, it probably lies within the margin of safety associated with the State ozone standard. Therefore, it is difficult to quantify any potential adverse impacts on public health and welfare. Based on the staff's review of the relevant information, the single exceedance does not provide sufficient basis for a nonattainment designation. Because the exceedance satisfies the conditions specified in Appendix 2 to the designation criteria, as it is proposed to be amended in Chapter II of this Staff Report, the exceedance qualifies as an unusual concentration event and is excluded from the area designation process. Ozone data for this monitoring site will be reviewed next year, when additional data are available.

All remaining ozone data collected during 1992 through 1994 at sites in Inyo County show no exceedances of the State standard. Therefore, the staff does not recommend any change to Inyo County's unclassified designation for the State ozone standard, contingent on the Board's approval of the proposed amendments to Appendix 2 of the designation criteria (see Chapter II, Section B).

3. Orange County - Carbon Monoxide

Orange County in the South Coast Air Basin currently is designated as attainment for the State CO standards. There are two State standards for CO that apply in this area: a one-hour average concentration of 20 ppm and an eight-hour average concentration of 9.0 ppm. Both concentrations are not to be exceeded (CCR, Title 17, section 70200).

During 1992, four exceedances of the State CO standards were measured at sites in Orange County. A one-hour average CO concentration of 21 ppm was measured at the La Habra site. Based on CO data for 1992 through 1994, the rounded one-hour Expected Peak Day Concentration for this site is 18 ppm. Eight-hour average CO concentrations of 9.38 ppm, 9.14 ppm, and 9.14 ppm were measured at sites in Anaheim, Costa Mesa, and La Habra, respectively. Based on CO data for 1992 through 1994, the rounded eight-hour Expected Peak Day Concentrations for these three sites are 8.3 ppm, 8.6 ppm, and 8.6 ppm, respectively. Because all four of the exceedances are higher than the applicable rounded Expected Peak Day Concentration, they qualify as extreme concentration events and are excluded from the area designation process.

The remaining CO data collected during 1992 through 1994 at monitoring sites in Orange County show no exceedances of the State CO standards. Therefore, the staff does not recommend any change to Orange County's attainment designation for the State CO standards.

4. Southeast Desert Air Basin - Nitrogen Dioxide

The Southeast Desert Air Basin currently is designated as attainment for the State nitrogen dioxide standard. The State nitrogen dioxide standard is a one-hour average concentration of 0.25 ppm. This concentration is not to be exceeded (CCR, Title 17, section 70200).

During May 1993, a one-hour average nitrogen dioxide concentration of 0.36 ppm was measured at the Trona-Athol monitoring site in the Southeast Desert Air Basin portion of San Bernardino County. This concentration exceeds the State standard. Based on data for 1992 through 1994, the rounded Expected Peak Day Concentration for the Trona-Athol site is 0.07 ppm. Because the measured exceedance is higher than the rounded Expected Peak Day Concentration, the exceedance qualifies as an extreme concentration event and is excluded from the area designation process.

The remaining nitrogen dioxide data collected during 1992 through 1994 at monitoring sites in the Southeast Desert Air Basin show no exceedances of the State standard. Therefore, the staff does not recommend any change to the Southeast Desert Air Basin's attainment designation for the State nitrogen dioxide standard.

5. San Luis Obispo County - Sulfur Dioxide

San Luis Obispo County in the South Central Coast Air Basin currently is designated as attainment for the State sulfur dioxide standards. There are two State standards for sulfur dioxide: a one-hour average concentration of 0.25 ppm and a 24-hour average concentration of 0.04 ppm. Both of these concentrations are not to be exceeded (CCR, Title 17, section 70200).

During June 1993, a one-hour sulfur dioxide concentration of 0.57 ppm and a 24-hour sulfur dioxide concentration of 0.046 ppm were measured at the Nipomo-1300 Guadalupe monitoring site. Based on sulfur dioxide data for 1992 through 1994, the one-hour rounded Expected Peak Day Concentration for this site is 0.13 ppm, and the 24-hour rounded Expected Peak Day Concentration is 0.02 ppm. Because the measured exceedances are higher than the applicable rounded Expected Peak Day Concentration, they qualify as extreme concentration events and are excluded from the area designation process.

The remaining 1992 through 1994 sulfur dioxide data collected at sites in San Luis Obispo County show no exceedances of the State standards. Therefore, the staff does not recommend any change to San Luis Obispo County's attainment designation for the State sulfur dioxide standards.

6. South Coast Air Basin - Sulfates

The South Coast Air Basin currently is designated as attainment for the State sulfates standard. The State standard for sulfates is a one-hour average concentration of 25 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$). This concentration is not to be equalled or exceeded (CCR, Title 17, section 70200).

During 1994, three exceedances of the State sulfates standard were measured at three sites in Los Angeles County. The measured concentrations were 26.8 $\mu\text{g}/\text{m}^3$ at the West Los Angeles-VA Hospital site, 26.7 $\mu\text{g}/\text{m}^3$ at the Hawthorne site, and 26.2 $\mu\text{g}/\text{m}^3$ at the Pico Rivera site. Based on sulfates data collected during 1992 through 1994, the rounded Expected Peak Day Concentrations for these three sites are 20 $\mu\text{g}/\text{m}^3$, 23 $\mu\text{g}/\text{m}^3$, and 21 $\mu\text{g}/\text{m}^3$, respectively. Because all the measured exceedances are higher than the applicable rounded Expected Peak Day Concentration, they qualify as extreme concentration events and are excluded from the area designation process.

The remaining sulfates data collected during 1992 through 1994 at monitoring sites in the South Coast Air Basin show no exceedances of the State standard. Therefore, the staff does not recommend any change to the South Coast Air Basin's attainment designation for the State sulfates standard.

7. Los Angeles County - Lead

Los Angeles County in the South Coast Air Basin currently is designated as attainment for the State lead standard. The State lead standard is a 30-day average concentration of 1.5 micrograms per cubic meter. This concentration is not to be equalled or exceeded (CCR, Title 17, section 70200).

During 1992 through 1994, two exceedances of the State lead standard were measured at the Commerce-61st Street-L.A. Paper Box monitoring site. The first exceedance, during March 1993, was 1.83 ug/m³. This exceedance was caused by equipment modifications and construction activities intended to reduce lead emissions. Based on these circumstances, the Executive Officer identified the exceedance as an exceptional event last year. As a result, the exceedance is excluded from the area designation process.

A second exceedance of the State lead standard, 1.66 ug/m³, occurred during August 1994. This exceedance was greatly influenced by a single high 24-hour concentration. The high 24-hour concentration, 9.16 ug/m³, measured on August 24, 1994, was caused by plowing for weed abatement in a nearby area. Based on lead data collected during 1992 through 1994, the 24-hour rounded Expected Peak Day Concentration for the Commerce-61st Street-L.A. Paper Box site is 6.52 ug/m³. Because the high 24-hour concentration is higher than the rounded Expected Peak Day Concentration, it qualifies as an extreme concentration event and is excluded from the area designation process. When the high 24-hour concentration is excluded, the 30-day average concentration based on the remaining data collected at the Commerce-61st Street-L.A. Paper Box site is 0.83 ug/m³, which does not exceed the State lead standard.

The remaining 30-day average lead concentrations for monitoring sites in Los Angeles County show no exceedances of the State standard. Therefore, the staff does not recommend any change to Los Angeles County's attainment designation for the State lead standard.

8. Santa Barbara County - Hydrogen Sulfide

Santa Barbara County in the South Central Coast Air Basin currently is designated as attainment for the State hydrogen sulfide standard. The State standard for hydrogen sulfide is 0.03 ppm. This concentration is not to be equalled or exceeded (CCR, Title 17, section 70200).

During January 1992, a one-hour hydrogen sulfide concentration of 0.028 ppm was measured at the Santa Maria-Battles-Betteravia monitoring site. When rounded to the precision of the State standard, this concentration becomes 0.03 ppm, which is an exceedance. Based on hydrogen sulfide data collected during 1992 through 1994, the rounded Expected Peak Day Concentration for this site is 0.02 ppm. Because the measured exceedance is higher than the rounded Expected Peak Day Concentration, it qualifies as an extreme concentration event and is excluded from the area designation process.

The remaining hydrogen sulfide data collected during 1992 through 1994 at the monitoring sites in Santa Barbara County show no exceedances of the State standard. Therefore, the staff does not recommend any change to Santa Barbara County's attainment designation for the State hydrogen sulfide standard.

CHAPTER IV

PROPOSED AMENDMENTS TO THE SAN JOAQUIN VALLEY AND SOUTHEAST DESERT AIR BASIN BOUNDARIES

A. CURRENT AIR BASIN BOUNDARIES

State law (HSC section 39606(a)) requires the Board to divide the State into air basins, based on similar meteorological and geographic conditions. Whenever practicable, the air basin boundaries should consider political boundary lines (refer to Attachment A).

The San Joaquin Valley Air Basin (SJVAB) and the Southeast Desert Air Basin (SEDAB) share a common boundary line which bisects Kern County. The Board initially defined this Kern County boundary line during the 1960s, and revised the boundary in the early 1970s. The current boundary line generally follows the crest of the Tehachapi Mountains. The portion of Kern County that lies to the west of the boundary line is included in the SJVAB, while the portion of Kern County that lies to the east of the boundary line is included in the SEDAB. Historically, the SJVAB portion of Kern County has been under the jurisdiction of the San Joaquin Valley Unified Air Pollution Control District (San Joaquin Valley District), and the SEDAB portion of Kern County has been under the jurisdiction of the Kern County Air Pollution Control District (Kern County District).

B. PROPOSED AIR BASIN BOUNDARIES

The proposal to amend the Kern County portion of the boundary between the SJVAB and the SEDAB was prompted by a proposed change in the districts' boundary line. Both the San Joaquin Valley District and the Kern County District have been considering a proposed change to the boundary which defines the portion of Kern County that falls under the jurisdiction of each District. In addition, both Districts have requested the Air Resources Board to consider a similar change in the air basin boundaries. In general, the proposed change would add two areas, the Kern River Valley and the Cummings Valley, to the Kern County District (these two areas currently are part of the San Joaquin Valley District). The Kern County District Board of Directors unanimously endorsed the proposed district boundary change on July 27, 1995. The San Joaquin Valley District Board is expected to consider and endorse the proposed change at a September 1995, meeting. Based on data from the Kern County District, the staff believes that amending the descriptions of the Kern County portion of the SJVAB and the SEDAB boundaries to effect a similar change is appropriate. The proposed amendments would affect CCR, Title 17, sections 60107(h) and 60109(e).

In terms of geography, meteorology, and air quality, the Kern River Valley and the Cummings Valley are more similar to portions of the SEDAB than the SJVAB. Specifically, the elevations are similar to other areas included in the Kern County portion of the SEDAB, and the meteorology is

more like that found in the high desert than in the San Joaquin Valley. Although emissions in the Kern River Valley and the Cummings Valley are limited, the prevailing winds carry emissions from these two areas eastward, thereby impacting the SEDAB rather than the SJVAB. A more detailed discussion of the analysis and the full text of the proposed amendments to the air basin boundaries are included in Attachment D to this Staff Report.

C. STAFF RECOMMENDATION

The staff recommends the Board adopt the proposed amendments to the description of the Kern County portion of the SJVAB and SEDAB boundaries. The proposed amendments would affect CCR, Title 17, sections 60107(h) and 60109(e). The full text of the proposed amendments is shown in Attachment D to this Staff Report.

CHAPTER V

ALTERNATIVES TO THE PROPOSED AMENDMENTS

State law (HSC section 39607(e)) requires the Board to establish and periodically review criteria for designating areas as nonattainment, attainment, or unclassified for the State standards. Section 39607(e) also requires the Board, in developing and revising the designation criteria, to consider instances where there is poor or limited ambient air quality data and to consider highly irregular or infrequent violations. The designation criteria are set forth in CCR, Title 17, sections 70300 through 70306 and Appendices 1 to 4, thereof. The proposed amendments to Appendix 2 and the proposed minor technical revisions to sections 70303, 70303.5, 70304, and 70306 are consistent with the legal requirement. Chapter II of this Staff Report describes the proposed amendments and minor technical revisions, along with a discussion of the need and justification for the proposal. The staff has considered alternatives to the proposed amendments and has found none more suitable than those proposed.

The requirement for annually reviewing the area designations also is specified in State law (HSC section 39608(c)). The proposed amendments to the area designations are described in Chapter III of this Staff Report. The proposed area redesignations reflect the application of the designation criteria set forth in CCR, Title 17, sections 70300 through 70306, as they are proposed to be amended in Chapter II of this Staff Report. Each proposed area redesignation is accompanied by a discussion of its basis and justification. The staff has considered the potential alternatives to the proposed amendments to the area designations--namely, the no action alternative. However, based on the available data, the staff finds the proposed amendments are more appropriate than the no action alternative.

State law (HSC section 39606(a)) requires the Board to divide the State into air basins, based on similar meteorological and geographic conditions and, whenever practicable, in accordance with political boundary lines. The current California air basin boundaries are set forth in CCR, Title 17, sections 60100 through 60113. The proposed change to the boundary between the San Joaquin Valley and Southeast Desert Air Basins, which affects CCR, Title 17, sections 60107(h) and 60109(e), is consistent with the legal requirement. The basis and justification for the proposed boundary change are described in Chapter IV of this Staff Report. The staff has considered the potential alternatives to the proposed changes to the air basin boundaries--namely, the no action alternative. However, based on the available data, the staff finds the proposed change is more appropriate than the no action alternative.

CONFIDENTIAL - SECURITY INFORMATION

CHAPTER VI

IMPACTS OF THE PROPOSED AMENDMENTS

A. PUBLIC HEALTH AND WELFARE IMPACTS

1. Proposed Amendments to the Designation Criteria

The adoption of the proposed minor technical revisions to sections 70303, 70303.5, 70304, and 70306 of the designation criteria are necessary to clarify the application of the designation criteria, delete unnecessary or obsolete references, make the language of the regulations internally consistent, and correct grammatical errors. Because the proposed revisions do not make any substantive changes to the current application of the regulations, they will not result in any adverse impacts on public health and welfare.

The adoption of the proposed amendments to Appendix 2 to the designation criteria is necessary to provide reasonable area designations that are not affected by anomalous data. The proposed amendments may allow additional exceedances to be excluded from the area designation process for areas already designated as attainment or unclassified. Allowing additional exceedances to be excluded potentially may reduce the regulatory burden on businesses, resulting in cost savings. However, the staff is concerned that excluding additional exceedances potentially may have some adverse impact on public health and welfare. Because the full spectrum of the exceedances that potentially might be excluded under the proposed amendments cannot be defined, the potential adverse impacts cannot be quantified. However, to address this problem, the staff has proposed that the Executive Officer evaluate the potential adverse impacts on a case-by-case basis as possible unusual concentration events are considered. Any potential adverse impacts will then be considered as one of the elements in the identification process.

2. Proposed Amendments to the Area Designations

The adoption of the proposed amendments to the area designations is not expected in and of itself to result in any adverse impacts on public health and welfare. However, because State law specifies certain requirements based on an area's designation status, there may be indirect impacts. The proposed amendments would redesignate four areas as attainment. Redesignating these areas as attainment will have no adverse impacts on public health and welfare because a district is obligated not only to attain, but also maintain, the State standards once they are achieved.

In addition to the attainment redesignations, the proposed amendments would redesignate Mono County in the Great Basin Valleys Air Basin as nonattainment for the State ozone standard and the city of Calexico in the Southeast Desert Air Basin as nonattainment for the State carbon monoxide

standards. Redesignating these areas as nonattainment may result in the Board and districts adopting plans and control measures in accordance with Chapter 10 of Part 3 of the HSC, commencing with section 40910. Therefore, adopting the proposed redesignations ultimately may indirectly benefit public health and welfare. In contrast, any potentially adverse impacts on public health and welfare that are identified with respect to specific plans and control measures would be included in the development and consideration of such plans and control measures.

Finally, the proposed amendments to the area designations would redesignate one area, the Sacramento County Portion of the Census Bureau Urbanized Area, as nonattainment-transitional for the State carbon monoxide standards. Designating an area as nonattainment-transitional potentially may have some adverse impacts on public health and welfare because this designation category allows the district to review and potentially modify some of the control measures identified in its attainment plan. Any such modifications must be consistent with State and federal regulations and statutes. As with a nonattainment designation, any adverse impacts on public health and welfare that are identified with respect to the modified plan will be included in the development and consideration of such modifications.

3. Proposed Amendments to the Air Basin Boundaries

The adoption of the proposed amendments to the San Joaquin Valley and Southeast Desert Air Basin boundaries will make the air basin boundaries consistent with the district boundaries and facilitate planning efforts in homogeneous areas. Under State law, both districts are obligated to attain the State standards for all pollutants as expeditiously as practicable and maintain the State standards once they are achieved. Because the planning efforts in both areas are intended to improve ambient air quality, the proposed amendments are not expected to result in any adverse impacts on public health and welfare.

B. ECONOMIC IMPACTS

1. Overall Impacts of the Proposed Amendments

The proposed amendments to the designation criteria, the area designations, and the San Joaquin Valley/Southeast Desert Air Basin boundaries by themselves do not contain requirements for action. Subsequent requirements for action may result after additional steps, such as plan preparation and approval, are taken. The designation criteria provide a set of rules for the Board to follow in determining the appropriate designation status for the various pollutants for each area of the State. The area designations themselves are labels that describe the healthfulness of the air quality in each area. Finally, the air basin boundaries define areas

with similar characteristics and air quality. Because these regulations by themselves contain no requirements for action, they have no direct economic impact, and the following general determinations are appropriate:

The Executive Officer has determined that adoption of the proposed amendments will not create costs or savings, as defined in Government Code section 11346.5(a)(6), to any State agency or in federal funding to the State, costs or mandate to any local agency or school district whether or not reimbursable by the State pursuant to Part 7 (commencing with section 17500), Division 4, Title 2 of the Government Code, or other nondiscretionary savings to local agencies, except as discussed, below (refer to the section on Proposed Amendments to the Area Designations, below).

The Executive Officer also has determined, in accordance with Government Code section 11346.5(a)(8), that adoption of the proposed amendments will not have a significant adverse economic impact on businesses, including the ability of California businesses to compete with businesses in other States. Finally, the Executive Officer has determined that there will be no, or an insignificant, potential cost impact, as defined in Government Code section 11346.5(a)(9), on private persons or businesses directly affected as a result of adopting the proposed amendments.

In accordance with Government Code section 11346.3, the Executive Officer has determined that adoption of the proposed amendments will not affect the creation or elimination of jobs within the State of California, the creation of new businesses or the elimination of existing businesses within California, or the expansion of businesses currently doing business within California.

Before taking final action on the proposed amendments to the regulations, the Board must determine that no alternative considered by the agency would be more effective in carrying out the purpose for which the action is proposed or would be as effective or less burdensome to affected private persons than the proposed action (Government Code section 11346.14(b)).

2. Proposed Amendments to the Designation Criteria

Although the proposed amendments to the designation criteria will not have a direct economic impact, the Executive Officer has determined that the proposed amendments to Appendix 2 of the designation criteria may indirectly result in some economic benefits to the districts and local businesses. Maintaining an area's attainment or unclassified designation based on the exclusion of exceedances affected by an unusual concentration event would serve to delay the consequences of a nonattainment designation. In this situation, the district might for a time, avoid costs associated with developing and implementing an attainment plan. Similarly, local businesses might avoid the costs incurred by complying with resulting, required emission control measures. In addition, businesses operating nonvehicular sources

that emit at least 500 tons per year of a nonattainment pollutant or its precursors would avoid increased permit fees that might have been assessed. The economic benefit from a delay in designation as nonattainment would be temporary, if subsequent data showed that a nonattainment designation was appropriate. Nevertheless, potential adverse economic impacts would be identified at the time the nonattainment designation was proposed.

3. Proposed Amendments to the Area Designations

The proposed amendments to the area designations will not have any direct adverse economic impacts because they do not, by themselves, require any regulatory action. The area designations are labels which define the healthfulness of air quality in each area of the State. Although the proposed amendments to the area designations will not have any direct economic impacts, the Executive Officer has determined that the proposed amendments to redesignate the city of Calexico in Imperial County as nonattainment for the State carbon monoxide standards may indirectly result in some adverse economic impacts. These indirect adverse economic impacts would result from the planning requirements specified in State law and are described, below.

Pursuant to State law (HSC section 40911), a district with an area designated as nonattainment for ozone, carbon monoxide, nitrogen dioxide, or sulfur dioxide is required to prepare and submit an attainment plan to the Air Resources Board. Designating the city of Calexico as nonattainment for the State carbon monoxide standards would invoke the planning requirement for the first time in this area. (If the Board does not adopt the proposed nonattainment designation for the city of Calexico, this area will remain designated as unclassified for the State carbon monoxide standards with no concomitant planning requirements.) The development and implementation of an attainment plan might require additional district staff to evaluate the problem, develop an acceptable control strategy, and enforce emission control measures. The costs incurred by the districts in connection with the planning process are not reimbursable by the State pursuant to Part 7 (commencing with section 17500), Division 4, Title 2 of the Government Code because the statute does not mandate a new program or higher level of service of an existing program within the meaning of section 6 of Article XIII B of the California Constitution. In addition, districts have the authority to levy fees sufficient to cover their costs for planning, enforcement, and other district programs (see HSC sections 40510, 40522, 41081, 41512.5, 42311, and 44223).

In addition to the potential indirect economic impacts on the district, the Executive Officer has determined that adopting the proposed nonattainment designation for the city of Calexico might result in some indirect adverse economic impacts on local businesses. Businesses would be affected differently, depending on the control measures identified in the attainment plan. Because all emission control measures are not "equal," the costs to businesses for implementing the control measures undoubtedly will vary. This

cost differential will be considered in the planning process, under the requirements of HSC section 40910:

"Districts shall also consider the cost-effectiveness of their air quality programs, rules, regulations, and enforcement practices in addition to other relevant factors, and shall strive to achieve the most efficient methods of air pollution control."

In developing their attainment plans, the districts complete cost-effectiveness analyses to determine which emission control measures will be the most effective. Those measures that are most cost-effective generally are implemented first, lessening the overall economic impact on local businesses. However, in contrast, businesses with sources that are the most cost-effective to control usually will be the first to incur costs.

In addition to the emission control measures specified in an attainment plan, the State Board may, under State law (HSC section 39612), require districts with areas designated as nonattainment to impose additional permit fees. These fees would apply to nonvehicular sources authorized by district permits to emit 500 tons per year or more of a nonattainment pollutant or its precursors. If new sources that would be permitted to emit 500 tons per year or more locate in the area while it was designated as nonattainment, they may be subject to these fees. This provision of State law becomes inoperative on July 1, 1997, and is repealed as of January 1, 1998, unless a later enacted statute deletes or extends these dates.

Under HSC sections 44223 and 44225, districts (except the Sacramento district) with areas designated by the Board as nonattainment for any pollutant emitted by motor vehicles may levy a fee of up to \$4.00 on motor vehicles registered within the district. Districts levying this fee also must adopt programs for reducing air pollution from motor vehicles and for related activities to implement the California Clean Air Act of 1988.

TO THE PRESIDENT OF THE UNITED STATES
FROM THE SECRETARY OF THE DEPARTMENT OF THE ARMY
SUBJECT: [Illegible]

[The remainder of the page contains several paragraphs of extremely faint, illegible text, likely a memorandum or official communication.]

CHAPTER VII

DOCUMENTS RELIED UPON

The following is a list of the documents the staff used in developing the proposed amendments documented in this Staff Report:

1. Guideline on the Identification and Use of Air Quality Data Affected by Exceptional Events, Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, N.C., # EPA-450/4-86-007 (July 1986).
2. Supplement to the Technical Support Document for Proposed Amendments to the Criteria for Designating Areas of California as Nonattainment, Attainment, or Unclassified for State Ambient Air Quality Standards, Technical Support Division, California Air Resources Board, Sacramento, California (May 1992).

**RELEVANT SECTIONS OF THE
HEALTH AND SAFETY CODE**

22

1911

1912

ATTACHMENT A

RELEVANT SECTIONS OF THE HEALTH AND SAFETY CODE

Section 39606:

The state board shall:

(a) Based upon similar meteorological and geographic conditions and consideration for political boundary lines whenever practicable, divide the state into air basins to fulfill the purposes of this division.

Section 39607(e):

[The state board shall:]

Establish and periodically review criteria for designating an air basin attainment or nonattainment for any state ambient air quality standard set forth in Section 70200 of Title 17 of the California Code of Regulations. In developing and reviewing these criteria, the state board shall consider instances where there is poor or limited ambient air quality data, and shall consider highly irregular or infrequent violations. The state board shall provide an opportunity for public comment on the proposed criteria, and shall adopt the criteria after a public hearing.

Section 39608:

(a) The state board, in consultation with the districts, shall identify, pursuant to subdivision (e) of Section 39607, and classify each air basin which is in attainment and each air basin which is in nonattainment for any state ambient air quality standard. This identification and classification shall be made on a pollutant-by-pollutant basis. Where the state board finds that data is not sufficient to determine the attainment or nonattainment status for an air basin, the state board shall identify the air basin as unclassified.

(b) The state board may assign an attainment, nonattainment, or unclassified designation to one or more areas within any air basin unless the state board finds and determines that the pollutant for which the designation applies affects the entire region or is produced by emission sources throughout the region.

(c) Designations made by the state board shall be reviewed annually and updated as new information becomes available.

Section 40718:

(a) Not later than January 1, 1990, the state board shall publish maps identifying those cities, counties, or portions thereof which have measured one or more violations of any state or federal ambient air quality standard. The state board shall produce at least one separate map for each pollutant.

(b) A district may prepare the maps required under subdivision (a) for the area within its jurisdiction. If a district chooses to prepare maps, the district shall provide the maps to the state board for review not less than four months prior to the date when the state board is required to publish the maps, and pursuant to a schedule established by the state board for any subsequent maps.

(c) The maps produced pursuant to subdivision (a) shall be based upon the most recent monitoring results, using the best technological capabilities and the best scientific judgment. The maps produced pursuant to subdivision (a) shall clearly identify portions of each district which have or have not measured one or more violations of any state or federal ambient air quality standard. The maps shall be representative of the actual air quality in each portion of the district.

(d) The state board shall publish its criteria for preparing the maps pursuant to this section not later than January 31, 1989. To the extent applicable, the state board shall identify any criteria relating to meteorological impact on monitored air quality data; reliability of monitored data; magnitude, frequency, and duration of periods when ambient air quality standards are exceeded; and the area within the district in which the standards are exceeded.

(e) Any person may petition the state board to hold a public hearing on any proposed, adopted, amended, or revised map. If the petition is granted by the state board, the public hearing may be held at a regularly scheduled public hearing in Sacramento. Notice of the time and place of any hearing shall be given not less than 30 days prior to the hearing by publication in the district pursuant to Section 6061 of the Government Code. If a district includes portions of more than one county, the notice shall be published in each county not less than 30 days prior to the date of the hearing.

The notice shall include a description of the map proposed to be adopted, amended, or repealed and a summary description of the effect of the proposal.

(f) The state board shall review annually, and as appropriate revise, the maps required by this section, using the criteria developed pursuant to subdivision (c).

Section 40718 (continued)

(g) Nothing in this section is intended to prevent a district board from enacting and enforcing rules or regulations designed to prevent interference with or maintenance of state and federal air quality standards, or to prevent significant deterioration of air quality in any area of the district.

Section 40925.5(a):

A district which is nonattainment for the state ozone standard shall be designated "nonattainment-transitional" by operation of law if, during a single calendar year, the state standard is not exceeded more than three times at any monitoring location within the air basin.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations.

2. The second part of the document outlines the various methods and tools used to collect and analyze data. It highlights the need for consistent and reliable data collection processes to support informed decision-making.

3. The third part of the document focuses on the role of technology in modern data management. It discusses how advanced software solutions can streamline data collection, storage, and analysis, leading to more efficient and effective operations.

4. The fourth part of the document addresses the challenges associated with data security and privacy. It stresses the importance of implementing robust security measures to protect sensitive information from unauthorized access and breaches.

5. The fifth part of the document concludes by summarizing the key findings and recommendations. It reiterates the importance of a data-driven approach and the need for continuous improvement in data management practices.

TO THE DESIGNATION CRITERIA**

ATTACHMENT B

TEXT OF THE PROPOSED AMENDMENTS TO THE DESIGNATION CRITERIA CALIFORNIA CODE OF REGULATIONS TITLE 17, SECTIONS 70300 THROUGH 70306 AND APPENDICES 1 THROUGH 4, THEREOF

(Additions are shown as *italicized* and deletions as ~~stricken~~)

APPENDIX 2

AIR RESOURCES BOARD PROCEDURE FOR REVIEWING AIR QUALITY DATA POSSIBLY AFFECTED BY A HIGHLY IRREGULAR OR INFREQUENT EVENT

This Appendix describes the procedures that the Air Resources Board (~~state board~~) will use for reviewing air quality data possibly affected by a highly irregular or infrequent event with regard to the state ambient air quality standards. All decisions regarding the identification of data as being affected by a highly irregular or infrequent event will be made by the executive officer.

The ~~state board~~ *executive officer* will review air quality data for possible identification as affected by a highly irregular or infrequent event if the data are the only ~~violations~~ *exceedances* of an air quality standard in the area or if such identification would otherwise affect the designation of the area.

~~Two~~ *Three* types of highly irregular or infrequent events may be identified:

1. Exceptional Event.
2. Extreme Concentration Event.
3. Unusual Concentration Event.

Exceptional Events

An exceptional event is an event beyond reasonable regulatory control which causes an exceedance of a state standard. An exceptional event must be linked to a specific cause such as an act of nature or unusual human activity. As guidance to the states for determining exceptional events, the federal Environmental Protection Agency (EPA) has published Guideline on the Identification and Use of Air Quality Data Affected by Exceptional Events, (EPA-450/4-86-007), July 1986 (the EPA Guideline). The EPA Guideline provides an overall ~~criteria~~ *criteria* for determining whether an event is exceptional with regard to the national standards. The ~~state board~~ *executive officer* will use the EPA Guideline ~~on~~ *as* a general basis for reviewing ambient data, but will ~~not~~ be bound by the specific definitions in the EPA Guideline for the various types of exceptional events because those definitions are made on a national basis. In addition, since what may be exceptional in one part of the state may be common in another, each possible event will be evaluated on a case-by-case basis.

~~An extreme concentration event is an event beyond reasonable regulatory control which causes an exceedance of a state standard but which does not qualify as an exceptional event. The causes of an extreme concentration event include but are not limited to unusual meteorology.~~

The steps for identifying an exceptional event are:

1. A district (or the state board executive officer) identifies questionable data.
2. If a known exceptional event has occurred, the district gathers relevant data to document the occurrence.
3. If an exceptional event is only suspected, the district investigates available data for the possible event.
4. The district submits to the executive officer a request for identifying the data as affected by an exceptional event and also provides supporting documentation.
5. If the executive officer concurs with the district, he/she will identify the data as affected by an exceptional event.
6. If the district's request for identifying data as affected by an exceptional event cannot be supported, the district will be notified of the reasons. The executive officer will consider any additional data to support the request, but in the absence of any new evidence, will disapprove the request.

Extreme Concentration Events

An extreme concentration event is an event beyond reasonable regulatory control which causes an exceedance of a state standard but which does not qualify as an exceptional event. The causes of an extreme concentration event include but are not limited to unusual meteorology.

The steps for identifying an extreme concentration event are:

1. A district (or the state board executive officer) identifies questionable data.
2. If the event is not an exceptional event, with an identifiable cause, the state board executive officer will evaluate the data as affected by an extreme concentration event.
3. In evaluating a possible extreme concentration event, the state board executive officer shall use the data for the site at which the event is suspected to determine a limit for concentrations expected to recur no more frequently than once in one year. The limit shall be determined using the "exponential tail method" which is incorporated by reference herein and described in Part I Section B.1. of the "Supplement to the Technical Support Document for Proposed Amendments to the Criteria for Designating Areas of California as Nonattainment, Attainment, or Unclassified for State Ambient Air Quality Standards" (May 1992). Using conventional rounding procedures, the limit shall be rounded to be consistent with the level of precision in which the standard is expressed. If the possible extreme concentration exceeds the estimated concentration expected to recur no more frequently than once in one year,

the executive officer will consult with the district in identifying the data as affected by an extreme concentration event.

4. When an extreme concentration event is identified, the ~~state board~~ executive officer shall review other information, including but not limited to meteorological data, to determine whether air quality data for other sites in the area were affected by the extreme concentration event.

Unusual Concentration Events

An unusual concentration event is an event which causes an anomalous exceedance of a state standard and which does not qualify as an exceptional event or an extreme concentration event. An exceedance affected by an unusual concentration event may be identified only for an area designated as attainment or unclassified at the time of the exceedance.

The steps for identifying an unusual concentration event are:

1. A district (or the executive officer) identifies a questionable exceedance(s).
2. If the exceedance(s) has not been identified as having been affected by an exceptional event or an extreme concentration event, and if the area was designated as attainment or unclassified at the time of the exceedance(s), the executive officer will review the exceedance(s) to determine whether it was affected by an unusual concentration event.
3. In evaluating a possible unusual concentration event, the executive officer shall consider all relevant information, including but not limited to the amount and characteristics of air quality data, emission data, meteorological data, potential public health and welfare impacts, and any applicable state, district, and federal rules and regulations. To identify the exceedance(s) as affected by an unusual concentration event, the executive officer must find, based on the relevant information, that the impact of the exceedance(s) is limited to the local area, the exceedance(s) is not expected to recur, and that the data do not support a nonattainment designation.
4. If the exceedance(s) qualifies as possibly affected by an unusual concentration event, the executive officer will consult with the district in identifying the exceedance(s) as affected by an unusual concentration event.
5. An area may retain its attainment or unclassified designation based on the identification and exclusion of an exceedance(s) affected by an unusual concentration event for no more than three consecutive years. If the executive officer identifies an exceedance(s) affected by an unusual concentration event in the area in the fourth consecutive year, the area shall be redesignated as nonattainment.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 39608, Health and Safety Code.

70303. Criteria for Designating an Area as Nonattainment

(a) The state board shall designate an area as nonattainment for a pollutant if:

(1) Data for record show at least one violation of a state standard for that pollutant in the area, and the measurement of the violation meets the representativeness criteria set forth in "Criteria for Determining Data Representativeness" contained in Appendix 1 to this article and show at least one violation of a state standard for that pollutant in the area; or

(2) Limited or no air quality data were collected in the area, but the state board finds, based on meteorology, topography, and air quality data for an adjacent nonattainment area, that there has been at least one violation of a state standard for that pollutant in the area being designated.

(b) An area shall not be designated as nonattainment if the only recorded violation(s) exceedance(s) of that standard were based solely on data for record determined to be affected by a highly irregular or infrequent event. Data affected by a highly irregular or infrequent event will be identified as such by the executive officer in accordance with the "Air Resources Board Procedure for Reviewing Air Quality Data Possibly Affected by a Highly Irregular or Infrequent Event," set forth in Appendix 2 to this article.

(c) The state board shall, if requested by ~~a~~ the district no later than July 15, 1990 or no later than May 1 of each year thereafter pursuant to section 70306, identify that portion of a designated area within the district as nonattainment-transitional for a pollutant other than ozone with a standard averaging time less than or equal to 24 hours and for which samples are routinely collected every day if it finds that:

(1) Data for record for the previous calendar year are consistent with the criteria established in section 70304(a)(2) and show two or fewer days at all each site in the area with violations of a state standard for that pollutant (not including violations exceedances found to be affected by a highly irregular or infrequent event under the procedure set forth in Appendix 2);

(2) Evaluation of multi-year air quality, meteorological and emission data indicates that ambient air quality either has stabilized or is improving and that every site in the area is expected to reach attainment within three years; and

(3) The geographic extent of the area is consistent with the criteria established in section 70302.

(d) An area designated as nonattainment-transitional for a pollutant is close to attaining the standard(s) for that pollutant. The nonattainment-transitional designation provides an opportunity for a district to review and potentially to modify its attainment plan. Any modification to an attainment plan must be consistent with state and federal regulations and statutes.

NOTE: Authority Cited: Sections 39600, 39601, 39607, 39608, and 40925.5, Health and Safety Code. Reference: Sections 39607, 39608, and 40925.5, Health and Safety Code.

70303.5. Requirements for Ozone Nonattainment-Transitional

In evaluating whether a district meets the requirements of HSC 40925.5, the state board shall use the following guidelines:

(1) Data for record for the previous calendar year must be consistent with the criteria established in section 70304(a)(2) to ensure that no more than three exceedances have occurred;

(2) All data collected during the previous calendar year will be considered in the evaluation, including data possibly affected by a highly irregular or infrequent event under the procedure set forth in Appendix 2;

(3) Each day with concentration(s) that exceed the state ozone standard will be counted as one exceedance day; and

(4) No monitoring location may have more than three exceedance days during the previous calendar year.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 40925.5, Health and Safety Code. Reference: Sections 39607 and 40925.5, Health and Safety Code.

70304. Criteria for Designating an Area as Attainment

(a) The state board shall designate an area as attainment for a pollutant if:

(1) Data for record show that no state standard for that pollutant was violated at any site in the area; and

(2) Data for record meet representativeness and completeness criteria for a location at which the pollutant concentrations are expected to be high based on the spatial distribution of emission sources in the area and the relationship of emissions to air quality. Data representativeness criteria are set forth in "Criteria for Determining Data Representativeness" contained in Appendix 1 to this article. Data completeness criteria are set forth in "Criteria for Determining Data Completeness" contained in Appendix 3 to this article.

(b) Where there are limited or no air quality data for an area, the state board shall designate the area as attainment for a pollutant if it finds that no state standard for that pollutant has been violated in that area based on:

(1) Air quality data collected in the area during the most recent period since 1980 which meet the conditions in (a) above;

(2) Emissions of that pollutant or its precursors in the area have not increased since that period to a level at which the standard might be exceeded; and

(3) Air quality data collected in the area since the time period in (1) above do not show a violation of the state standard.

(c) Where an area has limited or no air quality data for nitrogen dioxide, sulfur dioxide, sulfates, and lead (particulate), the state board shall designate that area attainment for a pollutant if it finds that no state standard for that pollutant has been violated in that area based on the ~~state board's~~ "Screening Procedure for Determining Attainment Designations for Areas with Incomplete Air Quality Data" set forth in Appendix 4 to this article.

(d) A nonattainment area shall not be redesignated as attainment for a pollutant if:

(1) Data for record for the monitoring site showing the greatest violation of a state standard for that pollutant no longer are available; and

(2) No other site has been identified as equivalent by the executive officer.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 39608, Health and Safety Code.

70306. Annual Review of Designations

(a) The executive officer shall conduct annual reviews of all designations and shall propose revisions to the designations as necessary to the state board. The executive officer shall complete the annual reviews by November 15.

(b) Any request for a change in a designation and any submittal of information for purposes of the executive officer's consideration in the annual review of a designation shall be provided in writing to the executive officer no later than May 1 of each year ~~beginning~~ *beginning with May 1, 1990.*

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 39608, Health and Safety Code.

CALIFORNIA CODE OF REGULATIONS,
TITLE 17, SECTIONS 60200 THROUGH 60209

(Additions are shown as *italicized* and deletions as ~~stricken~~)

60200. Description of Non-County Areas.

(a) *City of Calexico as defined in the Imperial County Planning-Local Agency Formation Commission Manual*

(b) [Reserved]

(c) [Reserved]

(d) That portion of Lake County and portion of Sonoma County, referred to as the Geysers Geothermal Area, is described as follows:
Beginning at the northwest corner of T. 12 N, R. 9 W, Mount Diablo Base and Meridian; thence south along the range line common to R. 9 W and R. 10 W to the point of intersection with the Mendocino-Lake County border; thence east and south along the Mendocino-Lake County border to the point of intersection with the border of Sonoma County; thence west along the Mendocino-Sonoma County border to the point of intersection with the range line common to R. 10 W and R. 9 W; thence south along the range line common to R. 10 W and R. 9 W to the point of intersection with Big Sulfur Creek; thence southwest along Big Sulfur Creek to its confluence with Little Sulfur Creek; thence southeast, east, and northeast along Little Sulfur Creek to the point of intersection with the township line common to T. 10 N and T. 11 N; thence east along the township line common to T. 10 N and T. 11 N to the northeast corner of T. 10 N, R. 9 W; thence south along the range line common to R. 9 W and R. 8 W to the southwest corner of T. 10 N, R. 8 W; thence east along the township line common to T. 9 N and T. 10 N to the point of intersection with the Sonoma-Napa County border; thence northwest along the Sonoma-Napa County border to the point of intersection with the Lake-Napa County border; thence northeast along the Lake-Napa County border to the point of intersection with State Highway 29 (SH-29); thence north and west along SH-29 to the point of intersection with the township line common to T. 12 N and T. 13 N; thence west along the township line common to T. 12 N and T. 13 N to the northwest corner of T. 12 N, R. 9 W, the point of beginning.

Section 60107:

San Joaquin Valley Basin

- (a) All of San Joaquin County
- (b) All of Stanislaus County
- (c) All of Merced County
- (d) All of Madera County
- (e) All of Fresno County
- (f) All of Kings County
- (g) All of Tulare County
- (h) That portion of Kern County which lies west and north of a line described as follows:

~~Beginning at the Kern/Los Angeles County boundary and running north and east along the northwest boundary of the Rancho La Liebre Land Grant to the point of intersection with the range line common to R/ 15 W/ and R/ 16 W/; San Bernardino Base and Meridian; north along the range line to the northwest corner of S/ 2/ T/ 32 S// R/ 32 E/ Mount Diablo Base and Meridian; then east along the township line common to T/ 32 S/ and T/ 31 S// then north along the range line common to R/ 35 E/ and R/ 34 E/ then east along the township line common to T/ 29 S/ and T/ 28 S// then north along the range line common to R/ 36 E/ and R/ 35 E// then east along the township line common to T/ 28 S/ and T/ 27 S// then north along the range line common to R/ 37 E/ and R/ 36 E/ to the Kern/Tulare County boundary/~~

Beginning at the Kern-Los Angeles County boundary and running north and east along the northwest boundary of the Rancho La Liebre Land Grant to the point of intersection with the range line common to R. 16 W. and R. 17 W., San Bernardino Base and Meridian; north along the range line to the northwest corner of S. 19, T. 11 N., R. 16 W.; then northwest along the northeast boundary of the Rancho El Tejon Land Grant to the southeast corner of S. 33, T. 12 N., R. 17 W., San Bernardino Base and Meridian; then west and north to include all of S. 33, T. 12 N., R. 17 W.; then northwest along the Rancho El Tejon line to the southwest corner of S. 35, T. 32 S., R. 30 E.; then north to the northwest corner of S. 35, T. 31 S., R. 30 E.; then northeast along the boundary of the Rancho El Tejon Land Grant to the northwest corner of S. 19, T. 31 S., R. 31 E.; then east to the southwest corner of S. 18, T. 31 S., R. 32 E.; then north along the range line common to R. 31 E. and R. 32 E. to the northwest corner of S. 6, T. 29 S., R. 32 E.; then east to the southwest corner of S. 31, T. 28 S., R. 32 E.; then north along the range line common to R. 31 E. and R. 32 E. to the Kern-Tulare County boundary.

NOTE: Authority cited: Section 39601, Health and Safety Code. Reference: Sections 39001 and 39606(a), Health and Safety Code.

Section 60109:

Southeast Desert Basin

(a) All of Imperial County

(b) That portion of Riverside County which lies east of a line described as follows:

Beginning at the Riverside-San Diego County boundary and running north along the range line common to R. 4 E. and R. 3 E., San Bernardino Base and Meridian; then east along the township line common to T. 8 S. and T. 7 S.; then north along the range line common to R. 5 E. and R. 4 E.; then west along the township line common to T. 6 S. and T. 7 S. to the southwest corner of Section 34, T. 6 S., R. 4 E.; then north along the west boundaries of Sections 34, 27, 22, 15, 10, 3, T. 6 S., R. 4 E.; then west along the township line common to T. 5 S. and T. 6 S.; then north along the range line common to R. 4 E. and R. 3 E.; then west along the south boundaries of Sections 13, 14, 15, 16, 17 and 18, T. 5 S., R. 3 E.; then north along the range line common to R. 2 E. and R. 3 E.; then west along the township line common to T. 4 S. and T. 3 S. to the intersection with the southwest boundary of partial Section 31, T. 3 S., R. 1 W.; then northwest along that line to the intersection with the range line common to R. 2 W. and R. 1 W.; then north to the Riverside-San Bernardino County line.

(c) That portion of San Bernardino County east and north of a line described as follows:

Beginning at the San Bernardino-Riverside County boundary and running north along the range line common to R. 3 E. and R. 2 E., San Bernardino Base and Meridian; then west along the township line common to T. 3 N. and T. 2 N. to the San Bernardino-Los Angeles County boundary.

(d) That portion of Los Angeles County which lies north and east of a line described as follows:

Beginning at the Los Angeles-San Bernardino County boundary and running west along the township line common to T. 3 N. and T. 2 N., San Bernardino Base and Meridian; then north along the range line common to R. 8 W. and R. 9 W.; then west along the township line common to T. 4 N. and T. 3 N.; then north along the range line common to R. 12 W. and R. 13 W. to the southeast corner of Section 12, T. 5 N., R. 13 W.; then west along the south boundaries of Sections 12, 11, 10, 9, 8, 7, T. 5 N., R. 13 W. to the boundary of the Angeles National Forest which is collinear with the range line common to R. 13 W. and R. 14 W.; then north and west along the Angeles National Forest boundary to the point of intersection with the township line common to T. 7 N. and T. 6 N. (point is at the northwest corner of Section 4 in T. 6 N., R. 14 W.); then west along the township line common to T. 7 N. and T. 6 N.; then north along the range line common to R. 15 W. and R. 16 W. to the southeast corner of Section 13, T. 7 N., R. 16 W.; then along the south boundaries of Sections 13, 14, 15, 16, 17, 18, T. 7 N., R. 16 W.; then north along the range line common to R. 16 W. and R. 17 W. to the north boundary of the Angeles National Forest (collinear with township line common to T. 8 N. and T. 7 N.) then west and north along the Angeles National Forest boundary to the point of intersection with the south boundary of the Rancho La Liebre Land Grant; then west and north along this land grant boundary to the Los Angeles-Kern County boundary.

(e) That portion of Kern County east and south of a line described as follows:

Beginning at the Kern/Los Angeles County boundary and running north and east along the northwest boundary of the Rancho La Liebre Land Grant to the point of intersection with the range line common to R. 15 W. and R. 16 W., San Bernardino Base and Meridian; north along the range line to the northwest corner of S. 2, T. 32 S., R. 32 E. Mount Diablo Base and Meridian; then east along the township line common to T. 32 S. and T. 31 S.; then north along the range line common to R. 33 E. and R. 34 E. then east along the township line common to T. 29 S. and T. 28 S.; then north along the range line common to R. 36 E. and R. 35 E.; then east along the township line common to T. 28 S. and T. 27 S.; then north along the range line common to R. 37 E. and R. 36 E. to the Kern/Tulare County boundary.

Beginning at the Kern-Los Angeles County boundary and running north and east along the northwest boundary of the Rancho La Liebre Land Grant to the point of intersection with the range line common to R. 16 W. and R. 17 W., San Bernardino Base and Meridian; north along the range line to the northwest corner of S. 19, T. 11 N., R. 16 W.; then northwest along the northeast boundary of the Rancho El Tejon Land Grant to the southeast corner of S. 33, T. 12 N., R. 17 W., San Bernardino Base and Meridian; then west and north to include all of S. 33, T. 12 N., R. 17 W.; then northwest along the Rancho El Tejon line to the southwest corner of S. 35, T. 32 S., R. 30 E.; then north to the northwest corner of S. 35, T. 31 S., R. 30 E.; then northeast along the boundary of the Rancho El Tejon Land Grant to the northwest corner of S. 19, T. 31 S., R. 31 E.; then east to the southwest corner of S. 18, T. 31 S., R. 32 E.; then north along the range line common to R. 31 E. and R. 32 E. to the northwest corner of S. 6, T. 29 S., R. 32 E.; then east to the southwest corner of S. 31, T. 28 S., R. 32 E.; then north along the range line common to R. 31 E. and R. 32 E. to the Kern-Tulare County boundary.

San Joaquin Valley Unified APCD
1999 Tuolumne, Suite 200
Fresno, CA 93721

SUBJECT: Possibility of Moving the Boundary Between SJVUAPCD and KCAPCD

Dear Mr. Crow:

As you are probably aware, back in the late sixty's when CARB drew California Air Basin Boundaries, many of these lines were rather arbitrary and often followed political boundaries or prominent geological contours just for convenience.

Occasionally, CARB has changed these boundaries when a request has been supported with logic. For example, in 1972, at KCAPCD's request, CARB moved the Tehachapi area from the San Joaquin Valley Air Basin into the Southeast Desert Air Basin. CARB agreed the Tehachapi area is geographically and meteorologically more similar to East Kern than West Kern. It is now clear, we should have requested that two other small areas be included in the boundary change for the same reasons.

To correct that oversight, I would like to ask you to consider the possibility of SJVUAPCD and KCAPCD jointly requesting CARB again change the boundary between the San Joaquin Valley Air Basin and the Southeast Desert Air Basin by moving the Kern River Valley and the Cummings Valley areas from your basin into ours. The attached map shows in yellow the boundaries of these two areas.

I am proposing this change for the following reasons which I believe are consistent with the State Legislature's intent in defining air basins as set forth in California Health and Safety Code, Section 39606 (copy attached).

1. Geographically, both areas are similar to East Kern, not the San Joaquin Valley. More specifically, elevations are similar: Cummings Valley is about 3800 feet and adjacent Tehachapi is about 4000 feet. Kern River Valley is about 2600 feet and all of Kern County East of Tehachapi is between 2300 and 2800 feet. Bakersfield is at an elevation less than 500 feet.

Mr. David Crow
February 15, 1995
Page 2.

2. Both areas are meteorologically similar to East Kern, not the San Joaquin valley. More specifically, because both areas are above the typical SJV summer inversion layer and winter fog layer (both about 2200 feet), weather is "High Desert", not "Central Valley".
3. Most importantly, because of elevation, meteorology, and prevailing wind directions (shown on attached map), air pollutant emissions in these two areas have virtually no impact on San Joaquin Valley air quality, but do impact East Kern.

With such a proposal, it is logical for you to ask, "What fiscal and operational impact would such a change have on SJVUAPCD?" The following, I believe, accurately answers this question. Both areas contain few pollutant sources and no major sources. Sources consist of gasoline retail outlets, two or three dry cleaners, an aggregate plant, a concrete batch plant, and a few piston engines. In other words, permit fee revenue loss would be very small. In fact, fiscal impact may well be positive since Cummings Valley must be accessed from Tehachapi and Lake Isabella is only accessible from the Valley by way of the Kern River Canyon, a long, slow highway.

Another logical question is: What are the sentiments of the residents of these areas? Because Cummings Valley is not accessible from the Valley, it is socio-economically part of Tehachapi; consequently, residents and business support the suggested change. Similarly, Kern River Valley residents and businesses do not consider themselves part of the San Joaquin Valley; they have more in common with high desert communities, and, therefore, also support the proposed change. In fact, a large number of residents in these two areas now believe they are part of KCAPCD!

Please give this proposal your full consideration and let me know what you think. Thank you for the opportunity to share this idea with you.

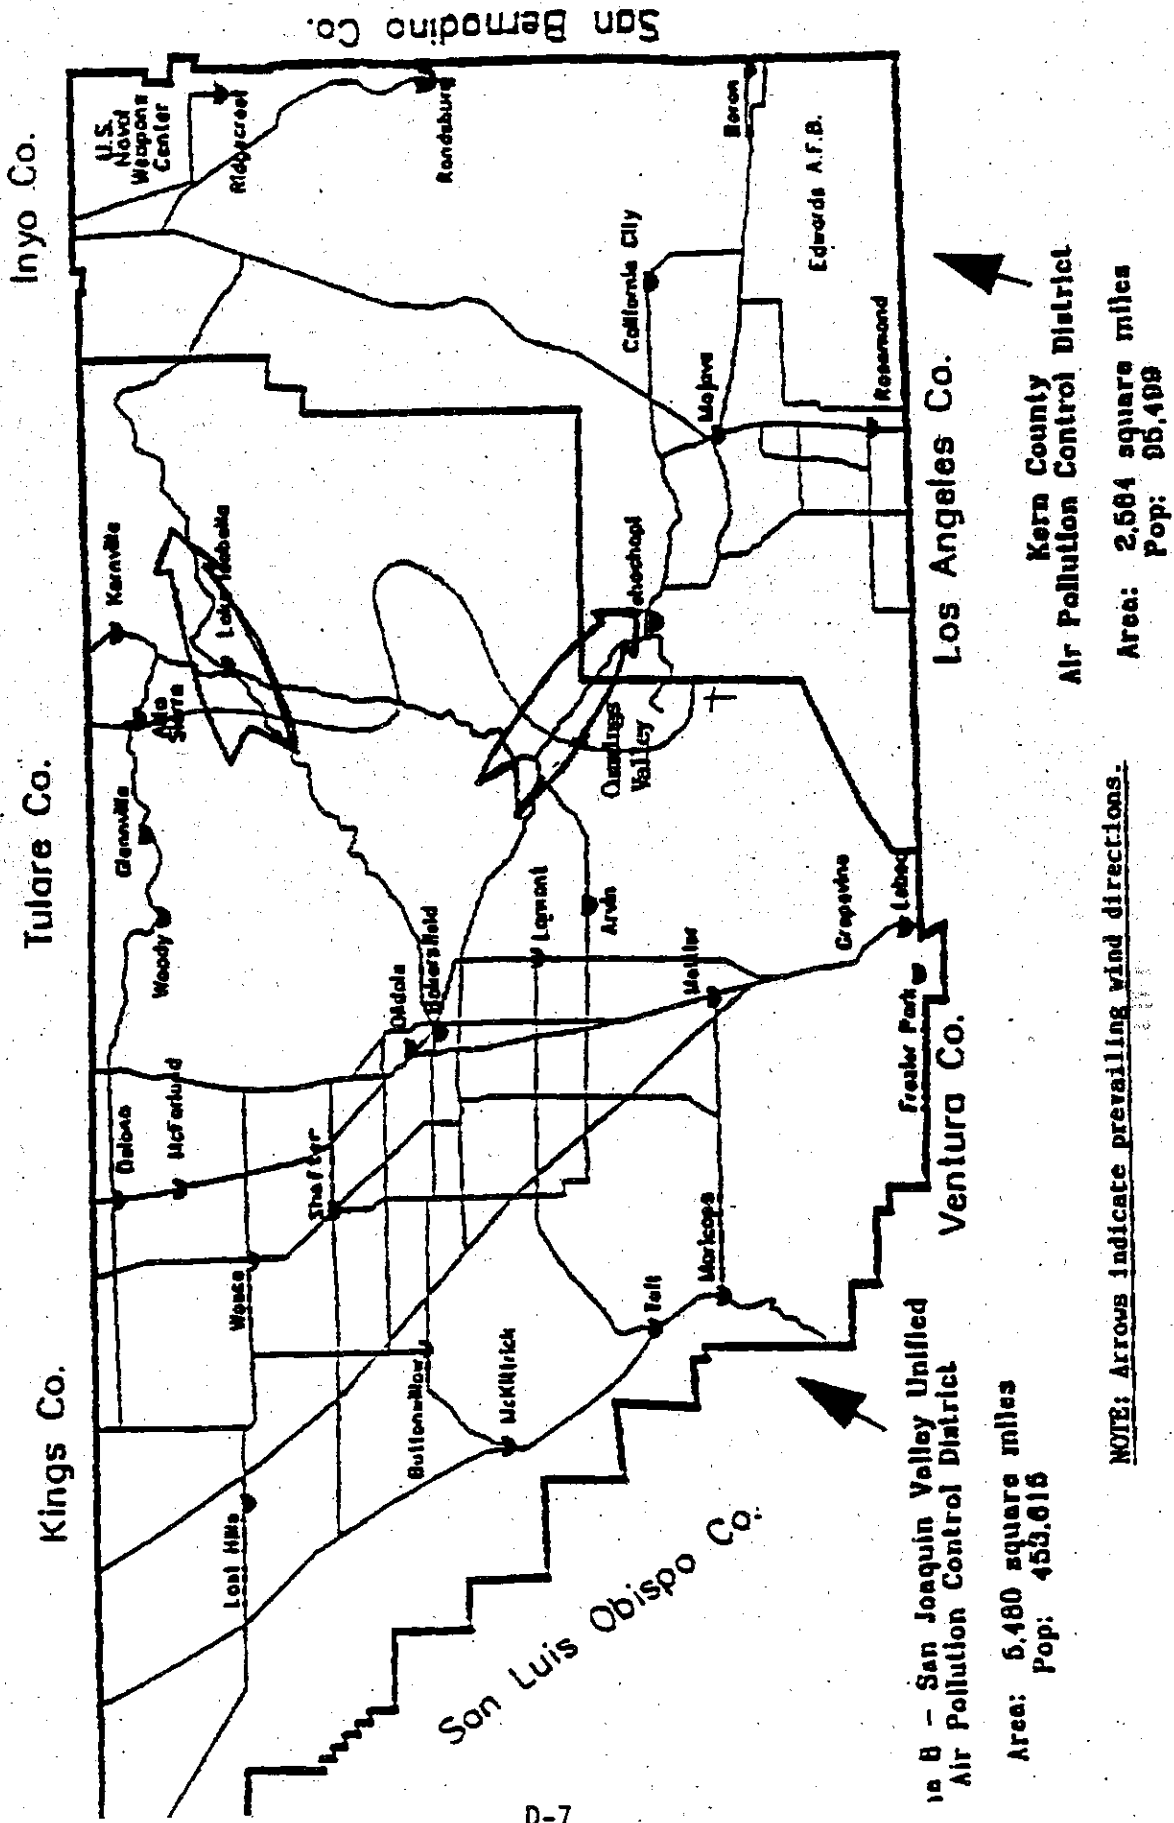

Sincerely,

Thomas Paxson, P.E., APCO

July 1995

BOUNDARY CHANGE

As our readers know, KCAPCD has been discussing with the San Joaquin Valley Unified APCD the possibility of changing the boundary between the two Districts to move the Kern River Valley and the Cummings Valley into KCAPCD. This proposal is based on the contention these two areas have meteorology, geography, and air quality more similar to East Kern's High Desert than the low-elevation San Joaquin Valley. CARB agrees with this contention.

SJVUAPCD has indicated a willingness to propose this change to its Board provided residents and businesses in these two areas do not object to the boundary change. In an effort to gauge the "temperament" of these areas, KCAPCD sent a questionnaire to all SJVUAPCD permittees in these areas and the "Kern Valley Sun" newspaper published an article about the proposal.

All feedback has been positive - residents and business support the change in spite of higher KCAPCD permit fees. People living in these two areas definitely view themselves as East Kern residents.

**Kern Council
of Governments**

To: Tom Paxon?	M. Lee	
Co:	Co:	
Dept:	Division:	
Fax #:	Fax #:	

Dear Mr. Lee:

The Kern Council of Governments (Kern COG) recently learned that the Kern County Air Pollution Control District is proposing to change the San Joaquin Valley/Southeast Desert air district boundary in Kern County. The Regional Transportation Plan (RTP) and Transportation Improvement Program (TIP) for the County of Kern were determined to be in conformity with the State Implementation Plan for air quality in December, 1994. The Kern County air quality conformity findings were made for each air basin within the county, based on the current air district boundary. While there does not appear to be any reason this proposed change should affect conformity, Kern COG would like assurance that the existing conformity will not be jeopardized. At least one 1995 TIP project in the area could be immediately affected by this change.

Kern COG is looking forward to having this matter clarified. Moving the air district boundary is a very important change, and preparations to handle its ramifications must be made.

Sincerely,

Ronald E. Brummist,
Executive Director

August 2, 1995

Mr. David Crow
Executive Director/APCO
San Joaquin Valley Unified APCD
1999 Tuolumne Street
Fresno, CA 93721

SUBJECT: Request to Realign Boundary Between SJVUAPCD and KCAPCD

Dear Mr. Crow:

On July 27, 1995, Kern County APCD's Board of Directors unanimously endorsed the concept of realigning the boundary between SJVUAPCD and KCAPCD to move certain areas currently in your District into our District and authorized me to work with you and CARB to effect this change. (Please see enclosed "Summary of Proceedings".)

Areas to be moved from your District to ours would include the Kern River Valley and the Cummings Valley, two areas with geography, meteorology, and air quality more similar to East Kern than the San Joaquin Valley.

Please be aware we sent a questionnaire regarding the proposed boundary change to all current SJVUAPCD permittees in these areas and an article regarding this subject appeared in the "Kern Valley Sun" newspaper. All responses received from industry and the public were positive, i.e. they support the change in spite of higher permit fees.

As you are aware, CARB agrees with this proposal and would like to place the proposed air basin (and thus, district) boundary change on its November agenda. Since you have previously indicated concurrence with this proposal, this letter is intended as an official request from my Board to you to place this item on your Board's agenda as soon as possible.

Also enclosed is a map (and legal description) showing the existing and proposed boundaries. Please note this map reflects a slight "tweaking" of the formerly proposed boundary to include all of the Bear Valley Community Services District (no equipment involved) and Pump Stations 2 and 3 of the Tehachapi Cummings County Water District.

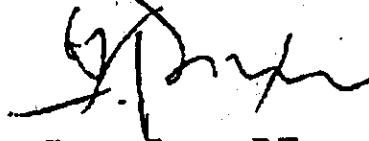

Mr. David Crow
August 2, 1995
Page 2.

(I believe both you and I envisioned the original proposal to encompass both stations. Station 2 is at about 3000 feet elevation and Station 3 is at about 4000 feet elevation.)

We have also received more than one request to include in this boundary change a small high-elevation area on the southern Kern County boundary which would include Frazier Park, Lebec, Lake of the Woods, and the Pine Mountain area - what are your thoughts concerning including this area? This area is all above 3000 feet with prevailing wind toward the desert.

Thank you very much for your assistance and cooperation in this matter. Please let me know if you have any questions or comments.

Sincerely,

Thomas Paxson, P.E.
Air Pollution Control Officer

August 25, 1995

Mr. James Boyd
Executive Officer
California Air Resources Board
2020 "L" Street
P.O. BOX 2815
Sacramento, CA 95812

SUBJECT: Request to Change Air Basin Boundary

Dear Mr. Boyd:

As you know, Kern County lies in two air basins: the San Joaquin Valley Air Basin (SJVAB) and the Southeast Desert Air Basin (SEDAB). Section 39606 of the California Health and Safety Code requires CARB to establish air basin boundaries based upon similar geography, meteorology, and air quality. Unfortunately, in the late sixties when CARB initially drew air basin boundaries, the boundary between the SJVAB and the SEDAB in Kern County did not fully reflect these criteria.

During recent months, we have discussed a boundary change with San Joaquin Valley Unified APCD staff and your staff. Everyone agrees there is technical justification for moving parts of the boundary in a westerly direction. (See enclosed map showing existing and proposed boundaries.)

On July 27th, my Board of Directors approved the concept of moving the boundary and authorized me to work with SJVUAPCD and CARB staff to effect the change. (See enclosed "Summary of Proceedings".)

Apparently, SJVUAPCD staff plan to ask their Board to approve this boundary change at its September 21st meeting.

It is the purpose of this letter to request your staff prepare the technical document necessary for your Board to approve the boundary change in November.

Thank you for your assistance. Please let me know if you have any questions.

Sincerely,

RE: Realignment of the Air Basin Boundary Between the San Joaquin Valley Unified Air Pollution Control District and the Kern County Air Pollution Control District

Dear Mr. Boyd:

On February 21, 1995, the San Joaquin Valley Unified Air Pollution Control District (District) received correspondence from the Kern County Air Pollution Control District (KCAPCD) expressing interest in realigning the boundary between our districts. On August 11, 1995, KCAPCD officially requested a realignment of the boundary between our districts.

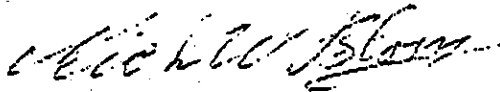

The District concurs with KCAPCD's proposal to realign the boundary between our districts. The proposed realignment as detailed in the legal description attached to KCAPCD's request letter is appropriate and acceptable to the District. A copy of the legal description of the proposed realignment is attached. Generally, the realignment constitutes moving the Kern River Valley and Cummings Valley areas from our District into the KCAPCD. If KCAPCD pursues the border change, and ARB supports and agrees to conduct the change, the District will assist in implementing the boundary changes.

The proposed border realignment will have minimal effects on the District. Both the Kern River Valley and the Cummings Valley areas contain few permitted sources and no major sources of pollutants. The KCAPCD conducted a survey of District permitted sources in the proposed realignment areas which indicated that these sources would support realignment efforts.

Mr. James Boyd
September 20, 1995
Page 2

The District concurs with the KCAPCD's proposal for realignment of the boundary between our air basins and will support such an effort. We look forward to your consideration and response in this matter, and stand ready to respond to any requests for assistance or information that you or your staff may have.

Very truly yours,

Nick W. Blom
Chair

Attachment

Beginning at the Kern - Los Angeles County boundary and running north and east along the northwest boundary of the Rancho La Liebre Land Grant to the point of intersection with the range line common to R.16.W. and R.17.W., San Bernardino Base and Meridian; north along the range line to the northwest corner of S.19., T.11.N., R.16.W.; then northwest along the northeast boundary of the Rancho El Tejon Land Grant to the southeast corner of S.33., T.12.N., R.17.W., San Bernardino Base and Meridian; then west and north to include all of S.33., T.12.N., R.17.W., then northwest along the Rancho El Tejon line to the southwest corner of S.35., T.32.S., R.30.E., then north to the northwest corner of S.35., T.31.S., R.30.E., then northeast along the boundary of the Rancho El Tejon Land Grant to the northwest corner of S.19., T.31.S., R.31.E., then east to the southwest corner of S.18., T.31.S., R.32.E., then north along the range line common to R.31.E. and R.32.E. to the northwest corner of S.6., T.29.S., R.32.E., then east to the southwest corner of S.31., T.28.S., R.32.E., then north along the range line common to R.31.E., and R.32.E. to the Kern - Tulare County boundary.

SB/maw
08/01/95
boundary.doc

The first part of the document is a report on the progress of the work done during the last year. It is divided into three main sections: the first section deals with the work done in the field, the second section deals with the work done in the laboratory, and the third section deals with the work done in the office.

In the field, the work was carried out in the following order: first, the area was surveyed, then the plants were collected, and finally, the plants were identified. The work in the laboratory was carried out in the following order: first, the plants were dried, then they were ground, and finally, the extracts were prepared. The work in the office was carried out in the following order: first, the data were collected, then they were analyzed, and finally, the results were written up.

The work done during the last year has been very successful. We have collected a large number of new plants, and we have identified many of them. We have also prepared a large number of extracts, and we have analyzed them. The results of our work are very interesting, and they show that there is a great deal of work to be done in this field.

ATTACHMENT E

TEXT OF THE CURRENT DESIGNATION CRITERIA CALIFORNIA CODE OF REGULATIONS, TITLE 17, SECTIONS 70300 THROUGH 70306, AND APPENDICES 1 THROUGH 4, THEREOF

70300. General Statement of Purpose

The objective of these criteria is to guide the state board in making designations of air basins as attainment, nonattainment, or unclassified for each of the pollutants for which state ambient air quality standards have been established in Section 70200.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 39608, Health and Safety Code.

70301. Air Quality Data Used for Designations

(a) Except as otherwise provided in this article, designations shall be based on data for record. "Data for record" are those data collected by or under the auspices of the state board or the districts for the purpose of measuring ambient air quality, and which the executive officer has determined comply with the siting and quality assurance procedures established in Part 58, Title 40, Code of Federal Regulations, as they existed on July 1, 1987, or other equivalent procedures. The executive officer shall also determine within 90 days of submittal of complete supporting documentation whether any other data which are provided by a district or by any other person comply with the siting and quality assurance procedures and shall be data for record. If the executive officer finds there is good cause that 90 days is insufficient time to make a determination, he/she may after notification of the person requesting the data review extend the deadline for completion of the data review.

(b) Except as otherwise provided in this article, designations and reviews of designations shall be based on data for record for the three calendar years prior to the year in which the designation is made or the annual review of the designation is conducted.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 39608, Health and Safety Code.

70302. Geographic Extent of Designations

(a) An air basin shall be the area designated for ozone, nitrogen dioxide, suspended particulate matter (PM₁₀), sulfates, and visibility reducing particles. Provided, however, if the state board finds (based on air quality data, meteorology, topography, or the distribution of population and emissions) that there are areas within an air basin with distinctly different air quality deriving from sources and conditions not affecting the

entire air basin, the state board may designate an area smaller than an air basin using political boundary lines to the extent practicable. In designating an area smaller than an air basin as nonattainment, the state board shall include within the area those sources whose emissions contribute to a violation of a standard for that pollutant. Contiguous areas which would have the same designation within an air basin shall be one designated area.

(b) A county or the portion of a county which is located within an air basin shall be the area designated for carbon monoxide, sulfur dioxide, lead (particulate), and hydrogen sulfide. Provided, however, if the state board finds (based on air quality data, meteorology, topography, or the distribution of population and emissions) that there are areas within the county with distinctly different air quality, it may designate a smaller area. In designating an area smaller than a county as nonattainment, the state board shall include within the area those sources whose emissions contribute to a violation of a standard for that pollutant.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 38608, Health and Safety Code.

70303. Criteria for Designating an Area as Nonattainment

(a) The state board shall designate an area as nonattainment for a pollutant if:

(1) Data for record meet the representativeness criteria set forth in "Criteria for Determining Data Representativeness" contained in Appendix 1 to this article and show at least one violation of a state standard for that pollutant in the area; or

(2) Limited or no air quality data were collected in the area, but the state board finds, based on meteorology, topography, and air quality data for an adjacent nonattainment area, that there has been at least one violation of a state standard for that pollutant in the area being designated.

(b) An area shall not be designated as nonattainment if the only recorded violation(s) of that standard were based solely on data for record determined to be affected by a highly irregular or infrequent event. Data affected by a highly irregular or infrequent event will be identified as such by the executive officer in accordance with the "Air Resources Board Procedure for Reviewing Air Quality Data Possibly Affected by a Highly Irregular or Infrequent Event," set forth in Appendix 2 to this article.

(c) The state board shall, if requested by the district no later than July 15, 1990 or no later than May 1 of each year thereafter pursuant to section 70306, identify that portion of a designated area within the district as nonattainment-transitional for a pollutant other than ozone with a standard averaging time less than or equal to 24 hours and samples are routinely collected every day if it finds that:

(1) Data for record for the previous calendar year are consistent with the criteria established in section 70304(a)(2) and show two or fewer days at all sites in the area with violations of a state standard for that pollutant (not including violations found to be affected by a highly irregular or infrequent event under the procedure set forth in Appendix 2);

(2) Evaluation of multi-year air quality, meteorological, and emission data indicates that ambient air quality either has stabilized or is improving and the area is expected to reach attainment within three years; and

(3) The geographic extent of the area is consistent with the criteria established in section 70302.

(d) An area designated as nonattainment-transitional for a pollutant is close to attaining the standard(s) for that pollutant. The nonattainment-transitional designation provides an opportunity for a district to review and potentially to modify its attainment plan. Any modification to an attainment plan must be consistent with state and federal regulations and statutes.

NOTE: Authority Cited: Sections 39600, 39601, 39607, 39608, and 40925.5, Health and Safety Code. Reference: Sections 39607, 39608, and 40925.5, Health and Safety Code.

70303.5. Requirements for Ozone Nonattainment-Transitional

In evaluating whether a district meets the requirements of HSC 40925.5, the Board shall use the following guidelines:

(1) Data for record for the previous calendar year must be consistent with the criteria established in section 70304(a)(2) to ensure that no more than three exceedances have occurred;

(2) All data collected during the previous calendar year will be considered in the evaluation, including data possibly affected by a highly irregular or infrequent event under the procedure set forth in Appendix 2;

(3) Each day with concentration(s) that exceed the state ozone standard will be counted as one exceedance day; and

(4) No monitoring location may have more than three exceedance days during the previous calendar year.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 40925.5, Health and Safety Code. Reference: Sections 39607 and 40925.5, Health and Safety Code.

70304. Criteria for Designating an Area as Attainment

(a) The state board shall designate an area as attainment for a pollutant if:

(1) Data for record show that no state standard for that pollutant was violated at any site in the area; and

(2) Data for record meet representativeness and completeness criteria for a location at which the pollutant concentrations are expected to be high based on the spatial distribution of emission sources in the area and the relationship of emissions to air quality. Data representativeness criteria are set forth in "Criteria for Determining Data Representativeness" contained in Appendix 1 to this article. Data completeness criteria are set forth in "Criteria for Determining Data Completeness" contained in Appendix 3 to this article.

(b) Where there are limited or no air quality data for an area, the state board shall designate the area as attainment for a pollutant if it finds that no state standard for that pollutant has been violated in that area based on:

(1) Air quality data collected in the area during the most recent period since 1980 which meet the conditions in (a) above;

(2) Emissions of that pollutant or its precursors in the area have not increased since that period to a level at which the standard might be exceeded; and

(3) Air quality data collected in the area since the time period in (1) above do not show a violation of the state standard.

(c) Where an area has limited or no air quality data for nitrogen dioxide, sulfur dioxide, sulfates, and lead (particulate), the state board shall designate that area attainment for a pollutant if it finds that no state standard for that pollutant has been violated in that area based on the state board's "Screening Procedure for Determining Attainment Designations for Areas with Incomplete Air Quality Data" set forth in Appendix 4 to this article.

(d) A nonattainment area shall not be redesignated as attainment for a pollutant if:

(1) Data for record for the monitoring site showing the greatest violation of a state standard for that pollutant no longer are available; and

(2) No other site has been identified as equivalent by the executive officer.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 39608, Health and Safety Code.

70305. Criteria for Designating an Area as Unclassified

The state board shall designate an area as unclassified for a pollutant if it finds that, except as otherwise provided in this article, the data do not support a designation of attainment or nonattainment.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 39608, Health and Safety Code.

70306. Annual Review of Designations

(a) The executive officer shall conduct annual reviews of all designations and shall propose revisions to the designations as necessary to the state board. The executive officer shall complete the annual reviews by November 15.

(b) Any request for a change in a designation and any submittal of information for purposes of the executive officer's consideration in the annual review of a designation shall be provided in writing to the executive officer no later than May 1 of each year commencing with May 1, 1990.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607 and 39608, Health and Safety Code.

APPENDIX 1

CRITERIA FOR DETERMINING DATA REPRESENTATIVENESS

This Appendix describes the criteria to be used in determining data representativeness for the purpose of designating areas as described in Article 3, Subchapter 1.5, Chapter 1, Part III, Title 17 (commencing with Section 70300), California Code of Regulations. Representativeness, as used here, is only related to whether or not the amount of data reported is deemed sufficiently complete to characterize reliably air quality during the respective time period. No other kind of representativeness is implied. The criteria for representativeness are summarized in the accompanying table and discussed further, below.

Air quality statistics are usually computed from short term observed values. For example, an annual arithmetic mean is computed from all available hourly samples. If all the short term values for the statistical time period are available, the calculated statistic is representative. However, because all the short term values for a given period often are not available, a minimum number of observations are needed to provide reasonable assurance that the calculated value is a reliable estimate. In general, statistics are considered representative if 75 percent of the possible short term values are included and are distributed throughout the entire statistical time period.

To ensure that seasonal variations are accounted for, representative annual statistics are required to have four representative calendar quarters of data. For example, if an annual mean is based on 24-hour samples, such as that computed for suspended particulate matter (PM10) samples, three representative months are required for each calendar quarter. A 24-hour particulate sample is collected once every six days or a total of five samples per 31-day month. Therefore, three or fewer samples (less than or equal to 60 percent data recovery) do not meet the criterion for a reliable estimate of the monthly mean concentration. The lack of representativeness of the monthly mean concentrations precludes a reliable estimate of a representative calendar quarter, which in turn precludes the representativeness of an annual statistic. Each level of criteria--hour, day, month, quarter, and year--must be met in order to make a representative annual statistic.

For observations made at less than 24-hour intervals, for example, hourly samples, representativeness depends on whether all the individual values are to be used or only a single daily value is to be used. In general, for representative statistics computed from all of the individual values, such as the mean of all hours, 75 percent of the values in the respective period are required. For representative statistics computed from daily values, such as the monthly mean of daily maximum hours, data from 75 percent of the days in the month are required and the data within those days must meet the relevant representativeness criteria.

**CRITERIA FOR REPRESENTATIVENESS OF
AIR QUALITY MEASUREMENTS AND STATISTICS**

<u>Representative Calendar Statistic</u>	<u>Sampling Time Period</u>	<u>Basis of Statistic or Requirement</u>	<u>Number of Representative Periods Required</u>
Year	Any		4 representative calendar quarters
Quarter	24-hour	Based on a daily sample	3 representative months
	<24-hours	Based on a daily statistic; or	69 or more representative calendar days
		Based on hourly samples	1,643 or more hours
Month	24-hour	Based on daily sample	4 or more 24-hour samples
	<24-hours	Based on a daily statistic; or	23 or more representative calendar days
		Based on all hourly samples; or	548 or more hours
		Based on all 2-hour samples; or	274 or more 2-hour samples
	Based on all 3-hour samples	183 or more 3-hour samples	
Day	1-hour		6 or more hours in each 1/3 day (hours 0 thru 7, 8 thru 15, 16 thru 23), and missing no more than 2 consecutive hourly samples
	<2-hour	Based on all 2-hour samples	9 or more samples
	3-hour	Based on all 3-hour samples	6 or more samples
	24-hour	Based on daily sample	22 but not more than 26 hours of sampling

N Number of Samples Needed

Mean of N Hour Period	24	18 or more hourly samples
	8	6 or more hourly samples
	6	5 or more hourly samples
	4	3 hourly samples
	3	3 hourly samples
	2	2 hourly samples
	1	30 minutes or more of sampling

APPENDIX 2

AIR RESOURCES BOARD PROCEDURE FOR REVIEWING AIR QUALITY DATA POSSIBLY AFFECTED BY A HIGHLY IRREGULAR OR INFREQUENT EVENT

This Appendix describes the procedures that the Air Resources Board (state board) will use for reviewing air quality data possibly affected by a highly irregular or infrequent event with regard to the state ambient air quality standards. All decisions regarding the identification of data as being affected by a highly irregular or infrequent event will be made by the executive officer.

The state board will review air quality data for possible identification as affected by a highly irregular or infrequent event if the data are the only violations of an air quality standard in the area or if such identification would otherwise affect the designation of the area.

Two types of highly irregular or infrequent events may be identified:

1. Exceptional Event.
2. Extreme Concentration Event.

An exceptional event is an event beyond reasonable regulatory control which causes an exceedance of a state standard. An exceptional event must be linked to a specific cause such as an act of nature or unusual human activity. As guidance to the states for determining exceptional events, the federal Environmental Protection Agency (EPA) has published Guideline on the Identification and Use of Air Quality Data Affected by Exceptional Events, (EPA-450/4-86-007), July 1986 (the EPA Guideline). The EPA Guideline provides an overall criterion for determining whether an event is exceptional with regard to the national standards. The state board will use the EPA Guideline on a general basis for reviewing ambient data, but will not be bound by the specific definitions in the EPA Guideline for the various types of exceptional events because those definitions are made on a national basis. In addition, since what may be exceptional in one part of the state may be common in another, each possible event will be evaluated on a case-by-case basis.

An extreme concentration event is an event beyond reasonable regulatory control which causes an exceedance of a state standard but which does not qualify as an exceptional event. The causes of an extreme concentration event include but are not limited to unusual meteorology.

The steps for identifying an exceptional event are:

1. A district (or the state board) identifies questionable data.
2. If a known exceptional event has occurred, the district gathers relevant data to document the occurrence.

3. If an exceptional event is only suspected, the district investigates available data for the possible event.
4. The district submits to the executive officer a request for identifying the data as affected by an exceptional event and also provides supporting documentation.
5. If the executive officer concurs with the district, he/she will identify the data as affected by an exceptional event.
6. If the district's request for identifying data as affected by an exceptional event cannot be supported, the district will be notified of the reasons. The executive officer will consider any additional data to support the request, but in the absence of any new evidence, will disapprove the request.

The steps for identifying an extreme concentration event are:

1. A district (or the state board) identifies questionable data.
2. If the event is not an exceptional event, with an identifiable cause, the state board will evaluate the data as affected by an extreme concentration event.
3. In evaluating a possible extreme concentration event, the state board shall use the data for the site at which the event is suspected to determine a limit for concentrations expected to recur no more frequently than once in one year. The limit shall be determined using the "exponential tail method" which is incorporated by reference herein and described in Part I Section B.1. of the "Supplement to the Technical Support Document for Proposed Amendments to the Criteria for Designating Areas of California as Nonattainment, Attainment, or Unclassified for State Ambient Air Quality Standards" (May 1992). Using conventional rounding procedures, the limit shall be rounded to be consistent with the level of precision in which the standard is expressed. If the possible extreme concentration exceeds the estimated concentration, the executive office will consult with the district in identifying the data as affected by an extreme concentration event.
4. When an extreme concentration event is identified, the state board shall review other information, including but not limited to meteorological data, to determine whether air quality data for other sites in the area were affected by the extreme concentration event.

NOTE: Authority Cited: Sections 39600, 39601, 39607, and 39608, Health and Safety Code. Reference: Sections 39607, 39608, Health and Safety Code.

APPENDIX 3

CRITERIA FOR DETERMINING DATA COMPLETENESS

This Appendix describes the criteria to be used in determining data completeness for the purpose of designating areas as attainment or nonattainment-transitional as described in Article 3, Subchapter 1.5, Chapter 1, Part III, Title 17 (commencing with Section 70300), California Code of Regulations. The purpose of these data completeness criteria is to specify the minimum data deemed necessary to assure that sampling occurred at times when a violation is most likely to occur.

Complete Data

Data for a site will be deemed complete if there are representative data (as determined in accordance with the Representativeness Criteria in Appendix 1) during the required hours (see below) of the day during the required months (see below) for the required years (see below).

Required Hours

The hours of potentially high concentration must be included. Unless a detailed evaluation determines different hours to be appropriate for a specific site, these hours are:

<u>Pollutant</u>	<u>Hours (PST)</u>
Ozone	9 am - 5 pm
Carbon Monoxide	3 pm - 9 am (next day)
Nitrogen Dioxide	8 am - 8 pm
Visibility Reducing Particles	10 am - 6 pm
Other Pollutants	Throughout day

Required Months

The months of potentially high concentrations must be included. Unless a detailed evaluation determines different months to be appropriate for a specific site, these months are:

<u>Pollutant</u>	<u>Months</u>
Ozone	July - September
Carbon Monoxide	January, November - December
Nitrogen Dioxide	October - December
Sulfur Dioxide	September - December
Sulfates	January, June - December
Lead (Particulate)	January, November - December
Other Pollutants	January - December

Required Years

The number of years to be included is:

- a) Three; or
- b) Two, if during these years the maximum pollutant concentration (not including data found to be affected by a highly irregular or infrequent event under the procedure set forth in Appendix 2) is less than three-fourths the applicable state ambient air quality standard; or
- c) One, if during this year the maximum pollutant concentration (not including data found to be affected by a highly irregular or infrequent event under the procedure set forth in Appendix 2) is less than one-half the applicable state ambient air quality standard.

APPENDIX 4

SCREENING PROCEDURE FOR DETERMINING ATTAINMENT DESIGNATIONS FOR AREAS WITH INCOMPLETE AIR QUALITY DATA

This Appendix describes the screening procedure that will serve as the basis for making a pollutant-specific finding under Section 70304(c) that the state ambient air quality standard is being attained for areas with no or an incomplete air quality data record. The procedure is applicable only for nitrogen dioxide, sulfur dioxide, sulfates, and lead (particulate). For those areas with some air quality data for the prior three years, the screening procedure will be applied for a pollutant only if the maximum concentrations of that pollutant in the area did not exceed 75 percent of the state standard(s).

<u>Pollutant</u>	<u>Screening Parameters</u>	<u>Screening Values</u>
Nitrogen Dioxide	a) Basin Population	1,000,000 people
	b) Total Annual NOx Emissions in Air Basin	40,000 tons/yr
	c) Total Annual Point Source NOx Emissions in County	2,100 tons/yr
Sulfur Dioxide	a) Total Annual Point Source SOx Emissions in County	1,700 tons/yr
	b) Maximum Annual SOx Emissions from Single Facility in County	900 tons/yr
Sulfates	a) Total Annual SOx Emissions in Air Basin	19,000 tons/yr
	b) Total Annual Point Source SOx Emissions in County	1,700 tons/yr
	c) Maximum Annual SOx Emissions from Single Facility in County	900 tons/yr
Lead	a) County Population	600,000 people
	b) Maximum Annual Lead Emissions from Single Facility in County	0.5 tons/yr

For an area to which these values are applied, the local values of the applicable screening parameters will be compared to the respective screening values. The area will be presumed to be attainment if none of the applicable screening parameters for a pollutant exceed the associated screening values.

ATTACHMENT F

EXPECTED PEAK DAY CONCENTRATIONS AND DESIGNATION VALUES

This attachment contains the Expected Peak Day Concentrations for various pollutants. The Expected Peak Day Concentration (EPDC) represents the concentration that statistically is estimated to recur once per year. In the area designation process, measured concentrations that are higher than the calculated EPDC, after the EPDC is rounded to the precision of the relevant State standard, are identified as affected by an extreme concentration event and are not considered violations of the State standards. In this attachment, the term Designation Value (DV) is used to refer to the highest measured concentration remaining at a given site after all concentrations affected by extreme concentration events are excluded. However, it is important to note that the Designation Values given in this attachment do not exclude concentrations affected by exceptional events or unusual concentration events. If the highest Designation Value within an area is not a violation of the State standard, and all other criteria are met, then the area can be considered in attainment for that pollutant.

The EPDCs and DVs listed in this attachment are based on air quality data collected during 1992 through 1994. This is the most recent three-year period for which air quality data are available and is the same three-year period used in reviewing the area designations described in the accompanying Staff Report. The EPDCs and DVs are listed for each site in the State with appropriate data. Concentrations are listed for ozone, carbon monoxide (8-hour and 1-hour averages), nitrogen dioxide, sulfur dioxide (1-hour and 24-hour averages), suspended particulate matter or PM10, sulfates, lead, and hydrogen sulfide in Tables F-1 through F-10, respectively. No values are listed for visibility reducing particles because data are not available for calculating the EPDCs and DVs for this pollutant.

The EPDCs and DVs listed here are based on all available data. However, in some cases, the data may not be complete or representative. Therefore, the resulting EPDCs and DVs also may not be representative. Individuals using the information presented in this attachment are encouraged to contact the Air Resources Board's Technical Support Division to determine whether the data of concern indeed are complete and representative.

Finally, it is important to note that the EPDC is the same indicator that the Air Resources Board endorsed for the air pollution control and air quality management districts to use as an indicator in reporting their progress toward attainment of the State standards, as required by the Health and Safety Code sections 40924(b) and (c). The use of the EPDC is described more fully in the document titled: "Guidance for Using Air Quality-Related Indicators in Reporting Progress in Attaining the State Ambient Air Quality Standards" (Air Resources Board, September 1993).

ATTACHMENT 6

SACRAMENTO COUNTY CARBON MONOXIDE ATTAINMENT ANALYSIS

ATTACHMENT G

SACRAMENTO COUNTY CARBON MONOXIDE ATTAINMENT ANALYSIS

Currently, the Sacramento County Portion of the Census Bureau Urbanized Area (the Sacramento Nonattainment Area) is designated as nonattainment for the State carbon monoxide (CO) standards. Under the designation criteria, the Sacramento Nonattainment Area now qualifies for redesignation as nonattainment-transitional.

The designation criteria specify two conditions related to air quality that an area must meet in order to be designated as nonattainment-transitional for a pollutant other than ozone. First, each site in the area must show no more than two days with violations during the previous calendar year. During 1994, there were no violations of the State CO standards at any site in the Sacramento Nonattainment Area. Therefore, the first condition is satisfied.

The second condition states that an evaluation of multiple years of data must show that air quality has stabilized or is improving, and every site in the area is expected to reach attainment within three years. The last violation measured at any site in the Sacramento Nonattainment Area occurred during 1993. The violation (9.38 parts per million (ppm) for an 8-hour average) occurred at the Sacramento-El Camino & Watt site. (Note that the 1-hour average State CO standard is not violated in this area.) The countywide CO emissions contributing to the 8-hour violation are estimated at 567.36 tons per day (t/d). The following table shows the results of a rollback analysis for 1995 through the year 2000, using the high CO concentration measured at the Sacramento-El Camino & Watt site and the projected annual countywide CO emissions. The rollback analysis shows that the maximum CO concentration in the Sacramento Nonattainment Area is expected to be below the level of the State 8-hour CO standard by 1995. Because countywide CO emissions are projected to continue to decrease thereafter, the maximum concentration is expected to continue to decline. These results satisfy the second condition specified in the designation criteria. Therefore, the area qualifies for redesignation as nonattainment-transitional for the State CO standards.

RESULTS OF CO ROLLBACK ANALYSIS FOR THE SACRAMENTO NONATTAINMENT AREA

<u>YEAR</u>	<u>COUNTYWIDE CO EMISSIONS</u>	<u>EXPECTED MAXIMUM CO CONCENTRATION</u>
1995	521.08 t/d	8.61 ppm
1996	508.11 t/d	8.40 ppm
1997	482.76 t/d	7.98 ppm
1998	457.05 t/d	7.56 ppm
1999	430.26 t/d	7.11 ppm
2000	402.63 t/d	6.66 ppm

ATTACHMENT H

MAPS AND TABLES OF THE AREA DESIGNATIONS FOR STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS

A. INTRODUCTION

This attachment fulfills the requirement of Health and Safety Code section 40718 for the Air Resources Board (the Board) to publish maps that identify where one or more violations of any State or national ambient air quality standard have been measured.

The attachment is divided into three sections. Section A details the levels and specific requirements of both the State and the national ambient air quality standards.

Section B contains maps and tables showing the area designations for each pollutant for which there is a State ambient air quality standard (State standard). These maps and summary tables reflect the proposed amendments to the area designations that the Board will consider in November 1995, pursuant to Health and Safety Code section 39608. An attainment designation indicates that pollutant concentrations in the area did not violate the State standard for that pollutant, excluding exceedances affected by highly irregular or infrequent events as defined in Appendix 2 to the designation criteria. A nonattainment designation indicates that a pollutant concentration did violate the State standard at least once during the previous three calendar years. Again, exceedances affected by highly irregular or infrequent events are excluded. An unclassified designation indicates that air quality and other relevant information are inadequate to determine whether the area is attainment or nonattainment. In addition to these three major designation categories, there is a subcategory of the nonattainment designation called nonattainment-transitional. This subcategory applies to areas that are close to attainment and meet other conditions as specified in the designation criteria.

Section C contains maps and summary tables showing the area designations for each pollutant for which there is a national ambient air quality standard (national standard). These area designations have been promulgated as final by the United States Environmental Protection Agency (U.S. EPA), based on the requirements in section 107(d) of the Clean Air Act as amended in 1990 (42 U.S.C. 7407(d)).

1. State and National Ambient Air Quality Standards

The Board has adopted and the U.S. EPA has promulgated ambient air quality concentration levels that define good air quality. These levels are the ambient air quality standards and were established to protect human health and/or welfare. The levels of the State and national standards may

differ because the Board and the U.S. EPA considered different bodies of information, and the Board chose to provide a wider margin of safety in the State standards than did the U.S. EPA in the national standards.

An ambient air quality standard is a concentration level expressed in either parts per million or micrograms per cubic meter and averaged over a specific time period such as one-hour, eight-hours, 24-hours, or one year. The different averaging times and concentrations are meant to protect against different exposure effects. Some ambient air quality standards are expressed as a concentration that is not to be exceeded. Others are expressed as a concentration that is not to be equalled or exceeded.

The national standards are further categorized as primary standards and secondary standards. The primary national standards are meant to protect public health. The secondary national standards are meant to protect the public welfare from any known or anticipated adverse effects of the pollutant.

The following table contains information for both the State standards and the national standards. Specifically, the table lists the applicable pollutant levels, averaging times, and analytical measurement methods.

**STATE AND NATIONAL
AMBIENT AIR QUALITY STANDARDS**

Pollutant	Averaging Time	California Standards ¹		National Standards ²			
		Concentration ³	Method ⁴	Primary ^{3,5}	Secondary ^{3,4,6}	Method ⁷	
Ozone	1 Hour	0.09 ppm (180 ug/m ³)	Ultraviolet Photometry	0.12 ppm (235 ug/m ³)	Same as Primary Std.	Ethylene Chemiluminescence	
Carbon Monoxide	8 Hour	9.0 ppm (10 mg/m ³)	Non-dispersive Infrared Spectroscopy (NDIR)	9 ppm (10 mg/m ³)		Non-dispersive Infrared Spectroscopy (NDIR)	
	1 Hour	20 ppm (23 mg/m ³)		35 ppm (40 mg/m ³)			
Nitrogen Dioxide	Annual Average		Gas Phase Chemilumi- nescence	0.053 ppm (100 ug/m ³)	Same as Primary Std.	Gas Phase Chemiluminescence	
	1 Hour	0.25 ppm (470 ug/m ³)					
Sulfur Dioxide	Annual Average		Ultraviolet Fluorescence	80 ug/m ³ (0.03 ppm)		Parosorbine	
	24 Hour	0.04 ppm (105 ug/m ³)		365 ug/m ³ (0.14 ppm)			
	3 Hour						1300 ug/m ³ (0.5 ppm)
	1 Hour	0.25 ppm (635 ug/m ³)					
Suspended Particulate Matter (PM ₁₀)	Annual Geometric Mean	30 ug/m ³	Size Selective Inlet High Volume Sampler and Gravimetric Analysis		Same as Primary Standard	Inertial Separation and Gravimetric Analysis	
	24 Hour	50 ug/m ³		150 ug/m ³			
	Annual Arithmetic Mean			50 ug/m ³			
Sulfates	24 Hour	25 ug/m ³	Turbidimetric Barium Sulfate				
Lead	30 day Average	1.5 ug/m ³	Atomic Absorption		Same as Primary Std.	Atomic Absorption	
	Calendar Quarter			1.5 ug/m ³			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 ug/m ³)	Cadmium Hydro- xide STRectan				
Vinyl Chloride (chloroethene)	24 Hour	0.010 ppm (26 ug/m ³)	Tedlar Bag Collection, Gas Chromatography				
Visibility Reducing Particles ⁸	8 hour (10 am to 6 pm, PST)	In sufficient amount to produce an extinction coefficient of 0.23 per kilometer due to particles when the relative humidity is less than 70 percent. Measurement in accordance with ARB Method V.					
Applicable Only in the Lake Tahoe Air Basin							
Carbon Monoxide	8 hour	6 ppm (7 mg/m ³)	NDIR				
Visibility Reducing Particles ⁹	8 hour (10 am to 6 pm, PST)	In sufficient amount to produce an extinction coefficient of 0.07 per kilometer due to particles when the relative humidity is less than 70 percent. Measurement in accordance with ARB Method V.					

(Footnotes on reverse side)

ARB Fact Sheet 39: 11/91

NOTES FROM AMBIENT AIR QUALITY STANDARDS TABLE

1. State standards for ozone, carbon monoxide (except the Lake Tahoe Air Basin), sulfur dioxide, nitrogen dioxide, suspended particulate matter (PM₁₀), and visibility reducing particles are values that are not to be exceeded. The State standards for sulfates, Lake Tahoe Air Basin carbon monoxide, lead, hydrogen sulfide, and vinyl chloride are not to be equalled or exceeded.
2. National standards, other than ozone and those based on annual averages or annual arithmetic means, are not to be exceeded more than once a year. The ozone standard is attained when the expected number of days per calendar year with maximum hourly average concentrations above the standard is equal to or less than one.
3. Concentration expressed first in units in which it was promulgated. Equivalent units, given in parentheses, are based upon a reference temperature of 25 degrees C and a reference pressure of 760 mm of mercury. All measurements of air quality are to be corrected to a reference temperature of 25 degrees C and a reference pressure of 760 mm of mercury (1013.2 millibars); ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent procedure which can be shown to the satisfaction of the Air Resources Board to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The level of air quality necessary, with an adequate margin of safety, to protect public health. Each State must attain the primary standards no later than three years after that State's implementation plan is approved by the U.S. Environmental Protection Agency (U.S. EPA).
6. National Secondary Standards: The level of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant. Each State must attain the secondary standards within a "reasonable time" after the State's implementation plan is approved by the U.S. EPA.
7. Reference method as describe by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. This standard is intended to limit the frequency and severity of visibility impairment due to regional haze and is equivalent to a 10-mile nominal visual range when the relative humidity is less than 70 percent.
9. This standard is equivalent to a 30-mile nominal visual range when the relative humidity is less than 70 percent.

2. Area Designations for the State Ambient Air Quality Standards

This section contains a description of the area designations for each pollutant for which there is a State ambient air quality standard listed in the California Code of Regulations, Title 17, section 70200. The information presented reflects the amendments to the area designations that the Board adopted on November 16, 1995.

The area designations for each pollutant are presented in the form of a map and also, a summary table. Areas are identified as attainment, nonattainment, nonattainment-transitional, or unclassified for each pollutant, as shown, below:

Attainment	A
Nonattainment	N
Nonattainment-Transitional	T
Unclassified	U

Generally, the Board designates areas by air basin or county. However, when there are areas of an air basin or county with distinctly different air quality deriving from sources and conditions not affecting the entire air basin or county, the Board may designate a smaller area. Generally, when the boundaries of the designated area differ from the air basin or county boundaries, the description of the specific area is referenced at the bottom of the summary table.

3. Area Designations for the National Ambient Air Quality Standards

This section contains a description of the area designations for each pollutant for which there is a national ambient air quality standard, except for lead. The national lead standard was promulgated after the Clean Air Act was amended in 1977, and in promulgating the national lead standard, the United States Environmental Protection Agency (U.S. EPA) did not require areas to be designated in a manner similar to other pollutants. The area designations for each pollutant are presented in the form of a map and also, a summary table.

The U.S. EPA uses two categories to designate areas with respect to ozone, carbon monoxide, and nitrogen dioxide. These designation categories are:

- o Does not meet primary standards, and
- o Cannot be classified or better than national standards.

Areas that do not meet the primary national standards are indicated on the following maps and summary tables as "N" for nonattainment. Areas that cannot be classified or are better than the national standards are indicated as "UA" for unclassified/attainment.

The U.S. EPA uses four categories to designate areas with respect to sulfur dioxide. These designation categories are:

- o Does not meet the primary standards,
- o Does not meet the secondary standards,
- o Cannot be classified, and
- o Better than the national standards.

In California, the first two designation categories listed above do not apply. The map and summary table for sulfur dioxide show areas that cannot be classified as "U" for unclassifiable and areas that are better than the national standards as "A" for attainment.

Finally, the U.S. EPA uses two categories to designate areas with respect to suspended particulate matter (PM10). These designation categories are:

- o Nonattainment, and
- o Unclassifiable.

The map and summary table for the national PM10 standards indicate "N" for areas designated as nonattainment and "U" for areas that cannot be classified.

From time to time, the boundaries of the California air basins have been changed to facilitate the planning process. The Board generally initiates these changes and they are not always reflected in the U.S. EPA area designations. For purposes of consistency with Section B of this attachment, all of the maps in the following section reflect the current air basin boundaries as adopted by the Board. Specifically, the maps show the western portion of Placer County in the Sacramento Valley Air Basin while the national area designations put the western portion of Placer County in the Mountain Counties Air Basin. Nevertheless, the summary tables in this section reflect the area designations as promulgated by the U.S. EPA.

(1) There are no nonattainment areas in California.

(2) Channel Islands National Monument:

Santa Barbara County includes Santa Cruz, San Miguel, Santa Rosa, and Santa Barbara Islands.

Ventura County includes Anacapa Island.

Note that the San Clemente and Santa Catalina Islands are considered part of Los Angeles County and therefore, are included as part of the South Coast Air Basin. San Nicolas is not part of the Channel Islands National Monument. It is considered as part of Ventura County.
