FINAL REGULATION ORDER

Adopt new Sections 2330, 2331, and 2332, Subchapter 8.5, Title 13, California Code of Regulations, to read as follows:

Subchapter 8.5 EMISSIONS FORMULA FOR EMPLOYER-BASED TRIP REDUCTIONS

- 2330. Applicability.** This subchapter shall be applicable to any air pollution control or air quality management district which adopts or amends a rule or regulation which establishes employer-based trip reduction requirements.
- 2331. Definitions.** The following definitions shall apply to this subchapter:
- (a) "AVR Base" is the average vehicle ridership based on the most recent survey of employees at the site or an average value provided by the air district. Employers shall have the option to choose either value.
 - (b) "AVR Goal" is the average vehicle ridership goal for a given year provided by the air district or implementing agency.
 - (c) "Annual Commute Emission Factor" is the annual emission factor, expressed in pounds per year, for a given year and pollutant based on a typical commute vehicle fleet, peak period speed distributions and temperatures, and average commute trip lengths for a given area.
- 2332. Emissions Formula.**
- (a) Air pollution control districts and air quality management districts shall use the following emissions formula, or an algebraic expression of the formula which produces the same mathematical results, to determine employer-based emissions reduction goals equivalent to employer-based trip reduction goals:

Employer-Based Emissions Reduction Goal =

$$\left(\begin{array}{l} \text{Average Daily} \\ \text{Peak Period Employees} \\ \text{as defined in district rules} \end{array} \right) \times \left(\frac{1}{\text{AVR Base}} - \frac{1}{\text{AVR Goal}} \right) \times \left(\begin{array}{l} \text{Annual Commute} \\ \text{Emission Factor} \end{array} \right)$$

Example: If peak employees equal 100, AVR Base is 1.2, AVR Goal is 1.5, and Annual Commute Emission Factor for Reactive Organic Gases (ROG) in 1995 is 21 lbs/year, then the Employer-Based Emissions Reduction Goal for ROG equals:

$$(100) \times \left(\frac{1}{1.2} - \frac{1}{1.5} \right) \times (21) = 336 \text{ lbs/year of ROG}$$

- (b) The state board shall provide the districts with district-specific annual commute emission factors to be used in the emissions formula and shall periodically update these factors. The factors shall be in a format that allows for varying trip lengths.
- (c) Air districts shall give employers with employment sites in more than one air district the option to use the formula as set forth in subdivision (a) of this section to determine emission reduction goals for any or all of their employment sites.
