

HARP 1.4b Change Details

1. On the Process screens in the Emission Inventory Module, the percent sulfur content field width has been increased to eight characters. This change corresponds to the recent change made to the percent sulfur field in the CEDIARS database. The field width and decimal length for percent sulfur are now seven and six, respectively.
2. Bug Fixed: An error occurred when importing areawide source transaction files without a HARP parent record.
3. Bug Fixed: An error occurred when opening a HARP generated KML file that contained special characters (i.e., <, >, ', and &).
