

## **Statewide Aboveground Storage Tank (AST) Population Estimate**

California Air Resources Board staff have completed an estimate of the statewide AST population. The AST population estimate was derived from information obtained through a survey of fuel carriers that deliver gasoline to AST.

The AST information provided by the fuel carriers was divided into 16 regions identified in the U.S. EPA's AP-42 manual, which is a methodology for estimating emissions from various sources. The regions identified in AP-42 are listed in the accompanying spreadsheets that contain the AST population information.

For detailed information on the survey or the methodology used to extrapolate the final survey results please contact LaMar Mitchell at (916) 445-9371 or via email at [lmitchel@arb.ca.gov](mailto:lmitchel@arb.ca.gov).
